

# When Wi-Fi is not available or accessible, and you want to update the thermostats software (connect it to internet).

2 different phones are needed to perform this. At least one with SIM card and data access.

## 1) Activate mobile / personal hotspot

Telephone with SIM card (& Data) needs to be activated / set up as Hotspot / Mobile Hotspot, enabling shearing of data and internet access from one phone to other devices.

Kindly follow your phone provider for the guideline: how to activate mobile hotspot.

2) Connect the phone, you want to use to set up the DEVIreg™ / ECtemp Smart to this established hotspot.

3) Set up your DEVIreg™ / ECtemp Smart following this guideline:

<https://www.youtube.com/watch?v=ruYvo-6Qfks> : Android

<https://www.youtube.com/watch?v=u0C8aM5lQfk> : iOS

4) During the installation process, when prompted to “Select network” (Wi-Fi to connect to), choose the Hotspot name and input the correct password.

*DEVIreg™ / ECtemp Smart will automatically update software when connected to internet for ~1 hour (or less).*
