

# Armalink 95

## Architectural security grilles

The Armalink 95 is an attractive, continental-style rolling grille, which offers extremely high security, as well as excellent looks and through vision, for both internal and external applications.

This grille can be constructed from galvanised steel, stainless steel or aluminium and can be self-colour or powdercoated to a wide range of colours, as well as anodised aluminium. These choices, coupled with a wide range of lattice styles, mean that the grille can be tailor-made to individual taste or design requirements.

The Armalink 95 grille is available with a 240V tubular, or 3-phase motor and can be supplied with a wide choice of automation options, such as: group control, remote control or access control systems. With its smooth, efficient operation, it is the perfect choice for applications such as underground car parks and the stainless steel option is an ideal solution for marine environments.

### ↓ Applications:

- Quality shopfronts
- Underground car parks
- Shopping malls
- Jewellers
- Conservation areas
