

Contract Range

Rollashield BFI, SFI & SI

Insulated sliding and folding doors

These high-quality folding and sliding doors are very reliable and durable with high performance. The panel U-value is 0.4 W/m²K, and gives a sound reduction of 29dB. The panels can be in a variety of standard Platisol colours or powder coated to any RAL colour. Other options include; vision panels, wicket doors and various operating systems including manual and electric.

Rollashield BFI is a bi-folding fast-acting door, taking only 7 seconds to open, available in widths up to 5700mm wide. The doors do not require a recessed bottom track. The doors also offer Class 2 water tightness and air permeability in accordance with BS EN 13241-1:2003.

Rollashield SI is a sliding door available up to 30 metres wide electrically operated or 100 metres wide with manual operation. The doors are available either top-hung or bottom rolling.

Rollashield SFI sliding-folding industrial doors are top-hung multi-leaf doors, available in widths up to 20 metres wide. The doors stack clear of the reveals, folding inwards at 90° to minimise the side room required for the door to stack.

↓ Applications:

- Wide openings
- Loading bays
- Hangars
