Brief overview of product range:

The ATG Access 168/900 retractable bollard was originally designed to complement the automatic bollard range. This model has since been utilised where a larger bollard is the aesthetic choice to create a visually more challenging deterrent to would-be-thieves or ram-raiders.

Mainly installed in areas where visibility may be an issue. The increased height of the product brings the bollard to the attention of passing pedestrians

Available in a variety of finishes and with a lift assist mechanism as standard. Our unique lift-assist mechanism enables us to supply heavy duty robust security solutions which can be operated by all. The mechanism reduces the product lifting weight by up to 70%.

Applications this product will protect

Car showroom protection, railway station perimeters, retail park security or used in conjunction with the 168 static variation.
