

***Durable fully bonded
natural aggregate surfacing***

Natratex is based on Bituchem's tried and tested asphalt technology it uses a unique clear binder system and high performance decorative aggregates to achieve natural finishes. Natratex is a leading product in the Bituchem product range and can be used for new construction, overlays and on regeneration projects.

Natratex is environmentally friendly and can be used throughout the year. It utilises key ingredients from the Bituchem range of hard landscaping products to create a durable, fully bonded natural aggregate surface course, offering an attractive selection of natural stone finishes to choose from.

Functionally and mechanically Natratex has the same characteristics as an "ordinary" asphalt surface course and is laid and compacted, at the same nominal thicknesses, using clean, conventional plant and equipment.

Natratex is flexible in terms of usage and has been successfully used on a wide variety of projects in both the public and private sectors. Natratex is suitable for both pedestrian and vehicular areas.

Natratex is manufactured using a clear binder specially formulated by Bituchem and is used to bond aggregates in traditional macadam gradings, which creates a durable hardwearing surface with the soft appearance of natural stone designed to blend in with the surrounding landscape.

Natratex is the ideal product for architects, engineers and designers who are looking for a hard landscaping product with a natural finish.

The Natratex colour palette can be used to compliment or contrast with the existing landscape. Natratex is particularly useful for heritage projects where colour schemes need to reflect the character of the existing architecture. The fact that Natratex is free from pigments means the natural colour of the aggregates used is retained long term.

The Bituchem design team are available to suggest solutions to your individual requirements, tailoring the aggregate type to suit the contract specification.

Natratex Application Season

Natratex can be applied throughout the year.

Suitable Natratex Applications

- ✓ Where there is a requirement for an asphalt to blend naturally with the landscape
- ✓ Residential roads and driveways
- ✓ Public car parks
- ✓ Playground areas
- ✓ Pavements and walkways
- ✓ Schools and cycleways
- ✓ Area demarcation

Benefits of Natratex

- ✓ Environmentally friendly
- ✓ Fast simple application
- ✓ Aesthetically pleasing
- ✓ Durable alternative to block paving
- ✓ Can be applied throughout the year
- ✓ Wide choice of natural finishes
