

WASHROOM ACCESSORY SELECTION AND APPLICATION GUIDE

WASHROOM REQUIREMENTS VARY WITH BUILDING OCCUPANCY TYPE.

Bobrick is a world-class manufacturer of high quality, durable accessories that contribute to the design of attractive, functional commercial and public washrooms. Our many years of experience have taught us that washrooms and the accessories used within them need to closely match the differing attributes and needs of all potential users. It is clear that, in order to meet these needs, it is important to divide washroom projects into different categories according to their end use.

In response to this and to aid selection of the most suitable and cost effective stainless steel washroom accessories for each project, this guide categorises Bobrick products in three distinct groups according to usage type.

PRESTIGE

In these high-end buildings and signature projects, typical washroom characteristics would include excellent architectural design and the use of high quality materials and equipment. Traffic flow would normally be moderate to low and abuse negligible.

HEAVY TRAFFIC

Typically, these are buildings with public access where large groups of people require the use of washroom facilities, often over short periods. In this case, washrooms and the accessories within them have to withstand periods of extremely high usage. Vandalism and abuse are to be expected and durability and extra large capacities become essential design considerations.

STANDARD USE

This is a demanding category where cost considerations may conflict with the need to maintain high standards of both architectural design and rugged practicality.

Washrooms in this environment are likely to be subjected to regular traffic and occasional abuse. In these buildings, equipment durability and minimum maintenance are just as important as budget considerations.

The following pages further illustrate the three categories and the table at the back lists our products and shows items considered most suitable for each usage type.

A SENSE OF OCCASION

For those buildings, where only a distinctive design statement and co-ordinated, high-quality finishes are appropriate, stainless steel washroom accessories are the natural choice.

Here, the flush fit of Trimline and the subtle curves of Contura provide valuable creative flexibility.

These design features, give strong visual continuity to both ranges.

And the strength of their stainless steel construction, means that their good looks will stand the test of time.

London Coliseum

New Street Square, London

PRESTIGE ENVIRONMENTS

Corporate Headquarters
 Civic Centres
 Major Universities
 High Specification Office Projects

Sadlers Wells Theatre, London

HEAVY TRAFFIC HIGH CAPACITY

Heavy traffic washrooms call for the specification of high capacity, long-lasting equipment.

Intensive usage places high demands on the durability of products used in the washroom environment. High capacity allows reasonable service intervals to be maintained without compromising washroom tidiness.

Stainless steel is ideal for these harsh conditions, providing long life while retaining its aesthetics.

HEAVY TRAFFIC ENVIRONMENTS

Shopping Malls
Sports Stadia
Railway Terminals
International Airports

Ministry of Defence, London

Westfield, London

University of East Anglia

STAINLESS QUALITY PLASTIC PRICES

Buildings with moderate traffic flows can also benefit from the advantages of stainless steel washroom accessories, even when budgets are tight.

Economies of scale and advances in manufacturing processes have driven down production costs.

Now the style, practicality and increased life expectancy of high quality, stainless steel washroom products have become a valid and affordable option.

The Sony Centre, Berlin

Civil Justice Courts, Manchester
