

Permeable Aggregates

As a long established manufacturer and supplier to the built environment, Brett is a key player in the development of SUDS solutions, including sub-base aggregates and permeable paving jointing material, for use within SUDS design.

The Brett sub-base aggregates shown here are capable of seamless integration into most SUDS projects to help enhance water quality, minimize flood risk and improve the management of our most valuable natural resource - water.

These aggregates have been specifically selected for use in permeable pavements to comply with the requirements laid out in the British Standards and Interpave guidance documents.

Brett Landscaping operate in compliance with EU and national standards and pursue rigorous control policies in line with our BES 6001 Responsible Sourcing of Construction Products Certification.

Permeable Aggregates

- Manufacturer: Brett Landscaping.
