Plaintile Vertical Cladding

Britmet Tileform Plaintile lightweight cladding system has been specified by our clients as a direct replacement for the existing clay plain tiles. Britmet Tileform have work alongside our clients to help produce a new insulated warm wall system. The Plaintile is BBA approved and is a fire-resistant cladding, ideal to comply with today's tough building regulations.

We have developed a specification that complies with the thermal performance required achieving an 0.3 u value for the walls and better. Plaintile is easy to fix and weighing only 7 kg/m² is the lightest plain tile vertical cladding system available, putting less stress on the cladding face of the building.

We have also put together some How To Videos to show the ease of fixing the insulated Plaintile system, starting from stripping the existing cold wall plain tile cladding, right through to laying the insulation, breather membrane and fixing of the Britmet Tileform Plaintile System.

To complement this Britmet Tileform have developed a range of specially tapered vertical cladding flashing to blend in with the Plaintile, which are fix behind the vertical battens onto the counter battens to ensure the water tightness and fire rating of the cladding is maintained with a fantastic finish.

Due to the design of the profile and strength of the Aluzinc based steel and tough and durable finish, the Plaintile can withstand any attacks from footballs and the like. All cracking, breaking or slipping of tiles are eliminated due the strong method of installation, The Plaintile is a maintenance free cladding system. Britmet Tileform's Plaintile is superb cladding finish for all our clients social housing regeneration schemes.
