

Bruynzeel library

Be inspired

 **bruynzeel** storage systems

THE FUTURE OF STORAGE, NOW

“An excellent place
to learn”

Bayonne University reference

All university files and dossiers are stored centrally in the heart of the city of Bayonne, on the site of a former army base. Extensive redevelopment culminated in a state-of-the-art 1,500 m² library. The library is organised into separate zones, including an information zone and reading areas, where users can access CD-ROMS, the internet and newspapers. There are also study areas, where visitors can find specific information about Basque literature, economy, management and law. The Sysco® library racks in the reading room are custom-built and feature an integrated lighting system. The building also has separate work areas. This is where the offices and book restoration department are housed, and where the University archives are stored in mobile Compactus® systems.

Bruynzeel Library

A library is a dynamic environment that should offer the freedom to relax, to meet people, to discover and to foster personal development. It should be an inspiring place while at the same time providing a peaceful atmosphere. It should be a pleasant space in which you can move happily and comfortably, knowing that the information you require can be found easily.

In Bruynzeel, you have a partner who doesn't just sell shelving, but inspiring and custom-designed libraries. Clear, intelligent solutions that provide you with the space you need. Efficiency and enjoyment, for many years to come.

Sysco® Library

A pleasant environment
A pleasant atmosphere

Sysco® Library: bespoke design

The design of your library reflects your style to a large extent. The shelving can be finished with a glass, steel, or wood design in colours that complement the interior.

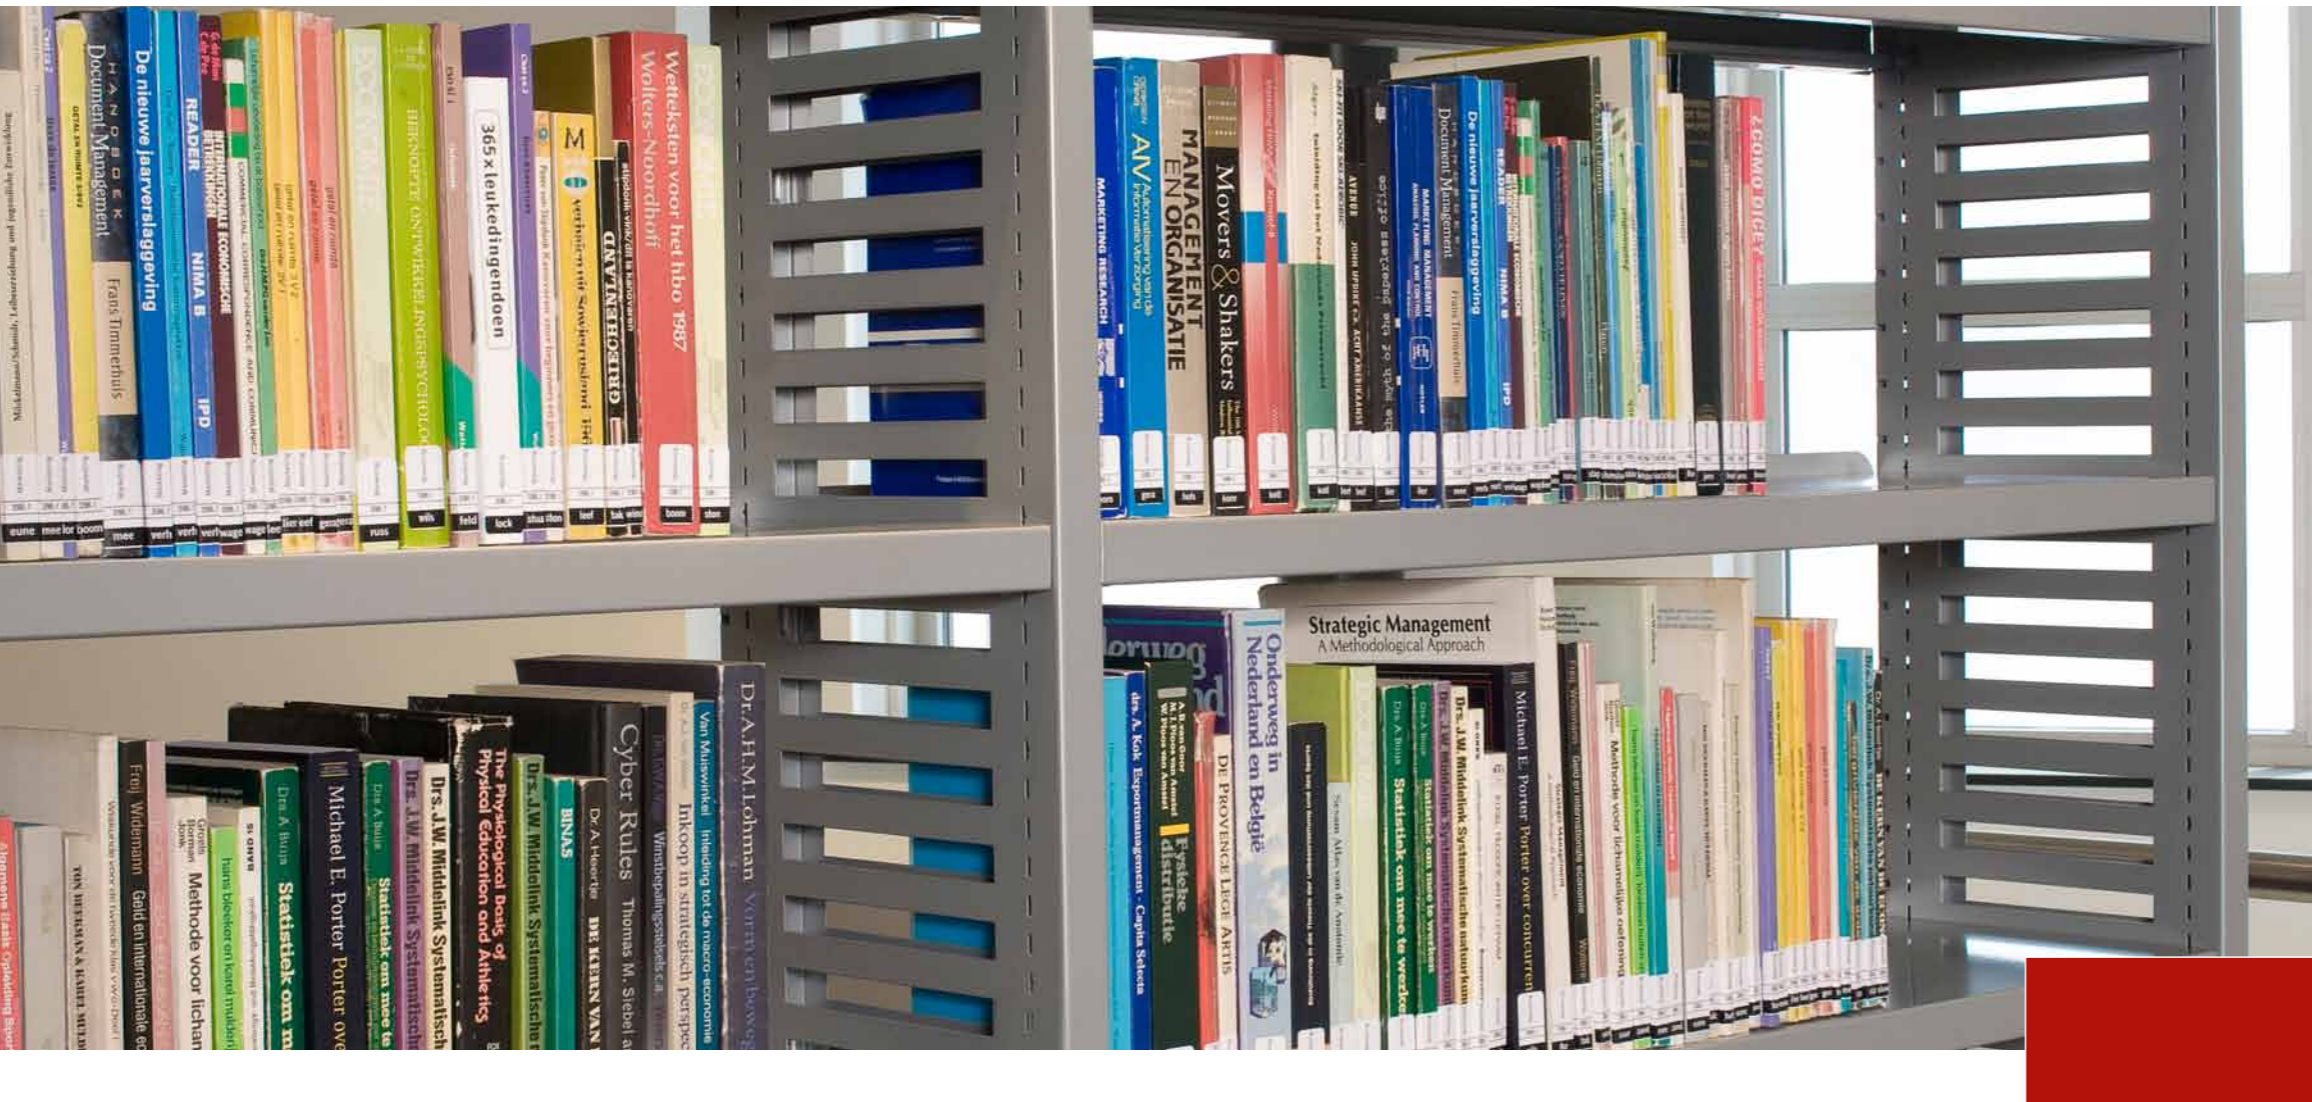

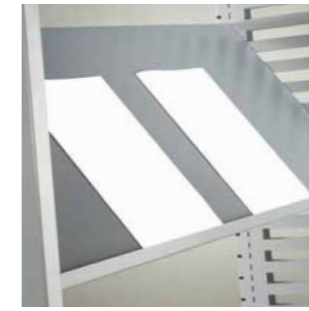

You can also go a step further, and choose a solution that emphasises your own style in an attractive way. Your logo can be incorporated into a panel, or you might prefer to have a unique image that reflects either your activities or the history of the premises, to help provide inspirational surroundings.

Sysco® Library: focus on acoustics

It is often the case that study desks, reading areas and storage facilities are located within the same room. It is important that people are able to read and study in a peaceful environment, and the right acoustics are important in this regard. Bruynzeel library shelving can be fitted with acoustic panels, which have noise-reducing properties that contribute towards creating a conducive atmosphere.

Sysco® Library

Quality at an affordable price

Sysco® Library: focus on functionality

If you work in a library, it is important that tasks can be carried out both efficiently and ergonomically. Our wide range of accessories ensures that all media can be stored in a well-organised manner; clear information signs ensure they can be quickly located. If you require to convert a section to Display shelves, our specially-developed shelf bracket enables any shelf to be easily slanted for presentation purposes. Thanks to the modular design, you can quickly re-position shelves or extend the system as required.

Sysco® Library: focus on quality

By choosing Bruynzeel, quality is guaranteed. We seek an open dialogue with our customers; this helps inspire us to develop and improve our creative solutions. As we have our own Research and Development department and an experienced team, we are able to tailor our products to your requirements and trends in the market. Our products are characterised by their high quality – fine-detail engineering, robust construction, durable finish.

Sysco® Library: focus on an affordable price

Would you like your library to have a modern appearance? Do you only have a limited budget available? No problem. The steel uprights are designed in such a way that no extra finishing is required. They can be supplied in several colours, and in different styles: plain, or perforated with round or slotted holes.

Compactus® Series

Save space

Compactus® Series: focus on space-saving storage

Mobile shelving is far more space-efficient than conventional static shelving. Sometimes called a moving-aisle system, the single access aisle is 'created' wherever it is required by moving the mobile book-stacks aside, either individually or all at the same time.

Compactus® Series: Designed with convenience in mind

Bruynzeel's Compactus® series is more than just a space-saving solution; the different systems are extremely easy to operate. Compactus® can be supplied with three different types of drive systems:
Original, a cost efficient solution.
Dynamic, optimum ease of use.
Dynamic Pro, maximum added value.

Compactus® Original: focus on functionality

Rotating the ergonomic operating handle provides swift and easy access to your collection. A wide range of accessories allows all your media to be neatly organised and safely stored. You can select from an extensive range of finish options, from cost-effective chain box covers to eye-catching coloured glass with LED lighting.

Compactus® Dynamic: focus on ergonomics and safety

Thanks to the electronic control system, Compactus® Dynamic units are easy to operate and effortless to move, even with your hands full. User safety is ensured by the Motor Current Monitoring System (MCMS). Additional safety systems, such as photo cells and motion detection, can also be built in. And to provide the best protection for your goods and files, Compactus® Dynamic can interface with safety and environmental systems including fire alarms and ventilation control. If electronics make our daily lives a little easier, why settle for anything less at work?

Compactus®

Dynamic Pro: Comfort+

Compactus® Dynamic Pro: extra comfort, security and efficiency

Dynamic Pro offers all the benefits of Compactus® Dynamic and more besides. This intelligent electronic control brings optimum ease of use, the best in operating functionality, safety, protection and secure storage. With help of the LCD touch screen you operate and program the system intuitively. To prevent anyone having unauthorised access to your documents, different aisles can be restricted to specific personnel or departments.

“After careful consultation this tailored solution fits like a glove”

The power of partnership

Finding efficient and sustainable storage solutions for your library requires careful consultation and is the key to designing a tailored solution that matches your needs. Because we have our own Research and Development department and an experienced team, we are able to adapt our products to your requirements and market trends. You spur us on to continue developing better and more creative solutions.

Reference National Library

This National Library houses the literary and musical treasures from countless museums. Bringing these collections together required close consultation. Requirements and wishes were translated into a tailored solution. The library's storage capacity has been increased by 25%, and the indoor climate is adjusted at night to allow adequate ventilation. Proper ventilation is one of the main requirements for the long-term preservation of valuable documents. The Library's total storage capacity comprises 115 kilometres of books, boxes, drawers and various collection items such as printing machines. A further 25 km is devoted to the storage of CDs, Cassettes and vinyl records.

Focus on quality and sustainability

Choosing Bruynzeel means quality and sustainability are guaranteed. Our products meet all the important international quality standards awarded by independent experts. Bruynzeel is a market leader when it comes to sustainability. Our factory in the Netherlands has been awarded ISO 9001 and ISO 14001 certification. ISO 14001 certification shows that we comply with environmental legislation and regulations and that we constantly endeavour to reduce our environmental impact.

This means that sustainability not only forms part of our day-to-day business, but also relates to our products themselves. We would be delighted to assist you in achieving your sustainability goals by offering you durable products and space-saving concepts. We also hope to contribute towards creating a pleasant work environment by offering flexible design solutions.
