

Vortex Shutters Secure New Sports Pavilion **Vortex Built In**

Located in the outskirts of London, the Claygate Pavilion reopened in 2021. Frequent vandal attacks motivated the Pavilion to strengthen its physical security. Vortex Shutters were selected to provide superior protection whilst also creating a welcoming environment for staff and visitors.

Enhancing Security

Vortex's patented lath design allows the security shutter to roll much more compactly, creating significantly smaller roll zones and hood box. This unique feature was considerably useful for the Pavilion's limited headroom above its openings.

The Vortex end retention system makes the shutter extremely resistant to impact, providing strong protection against intruders as well as accidental damage.

For this project, our Vortex Built-In shutter was integrated within the existing structure, creating a sleek and aesthetic finish. The result is a safe yet welcoming environment for the pavilion's visitors.

A Turbulent History

The Claygate Pavilion is run by Claygate Recreation Ground Trust.

The original building was burnt down in 2016 - as a result of criminal attack. A larger new pavilion opened in 2021 after a massive fundraising effort.

The Pavilion's security required urgent reinforcement given its secluded location and the fact it had been victim to vandal attacks a number of times in the past.
