

Vast Xonar 942 Security Shutter for City Development

Combining certified security with consideration for application aesthetics, Xonar 942 is one of the few security shutters to offer certification to LPS 1175: Issue 7, SR2 to the vast widths this development required.

Xonar 942 not only provides a certified, proven solution to intruder mitigation and occupants' safety, but requires little to no change to the structural of property.

Additional peace of mind is achieved with the unique self-locking technology this Xonar 942 features, mitigating lifting or sabotage of the shutter.

Certified security solution with 20% ventilation

As is the case with this project, commercial developments in busy cities greatly benefit from this unique solution.

For ventilation and solar control, Xonar 942 also offers perforation up to 20% for free air flow achieved through years of research and development.

Threat mitigation in commercial spaces

Xonar 942 offers specifiers, architects and ALOs alike a unique solution for access control, ventilation, and no auxiliary locking mechanisms.

For large opening widths, this vast security shutter mitigates the potential threat of intruders. Xonar 942 enhances the commercial office or retail space, providing an obvious security measure to any potential threats without compromising on aesthetic.
