In addition to our large range of standard products, CU Phosco Lighting are pleased to be able to offer their customers a design and manufacturing service for bespoke products.

The following pages show just a few examples of the numerous special design projects that we have undertaken.

Our associate company, Birch Engineering, have extensive experience in the design and manufacturing of bespoke metal sculptures. For over 10 years they have worked with leading artists, including the world renowned Diane McLean, to create innovative sculptures.

For inside or outside, in business premises, parks or municipal locations, Birch Engineering can provide the ideal sculptures to add character and provide a distinctive feature.
