what is BlindSet?

in.visibly.smart

A revolutionary new concept for recessed roller blinds in multi-unit residential projects.

Developed by Decor Systems, the blind is pre-fitted into a sealed housing in our factory.

The complete BlindSet is then installed on site as part of the ceiling, creating that minimalist look – but without the hassle, time or cost.

## in.visibly.hidden

**Fully concealed blinds** – create that high-end look, without the high-end cost.

**Ultra compact design** – at only 85mm high, BlindSet fits within the thickness of a typical MF ceiling, making it perfect for those tight spaces.

**Superior light control** – Unlike standard roller blinds, BlindSet blocks light ingress above the roller, for a better user experience.

in.visibly.modular

**Quality built-in** – offsite manufacturing ensures consistent high quality.

**Reduce site risks** – By integrating with the drylining, BlindSet removes an entire trade from site.

**Speed up the programme** – Being a modular solution, BlindSet can be manufactured ahead, ready for immediate call-off.

85mm

## in.visibly.simple

**Cut out the clashes** - unlike surface mounted blinds, BlindSet is flush with the ceiling, so works perfectly with inward opening windows and doors.

**Simple solid fixing** – no need to provide expensive pattrassing, or worry about oversize blind fixings penetrating the VCL – BlindSet takes care of the mounting detail by integrating with the ceiling.

**Snag free finish** - BlindSet has an integral protective cover which is removed on completion of works, leaving a pristine blind ready to use.

## in.visibly.flexible

**Add to taste** – integrated curtain track option allows users to add a curtain at any point.

**Fit for the future** - a simple wireless upgrade kit makes the blinds operate automatically, compatible with all major smart home systems.

**Looking ahead** – The fully removable closure piece makes it very easy to upgrade or replace the blind inside without any tools.
