Vertical Blind

# decor 150

## Vertical Blind

The decor 150 vertical blind is designed specifically for use in demanding contract environments. A highly versatile method of shading, the decor 150 is suitable for large or unusually shaped windows. The geared tilt mechanism enables you to smoothly adjust the louvres through 180 degrees to get the perfect balance of daylight and privacy.

### Made in the UK

Our UK manufacturing facility ensures total quality control, short lead times and low transport costs.

### Choose your Style

A choice of louvre widths and headrail finishes to suit your situation.

### Versatile and Flexible

A range of sizes and mounting configurations make decor 150 suitable for all kinds of windows large and small.

### Recyclable

The majority of a decor 150 blind can be recycled, conserving energy and resources for future generations.

### Environmentally sustainable fabrics

Choose sustainable fabrics from Decor Systems range to pick up environmental credits.

### Compatible with Natural Ventilation systems

The optional guide wire system enables the blind to withstand draughts from open windows.

### 5 Year Warranty

For peace of mind and reduced life cycle costs, decor 150 comes with the Decor Systems standard 5 year warranty.

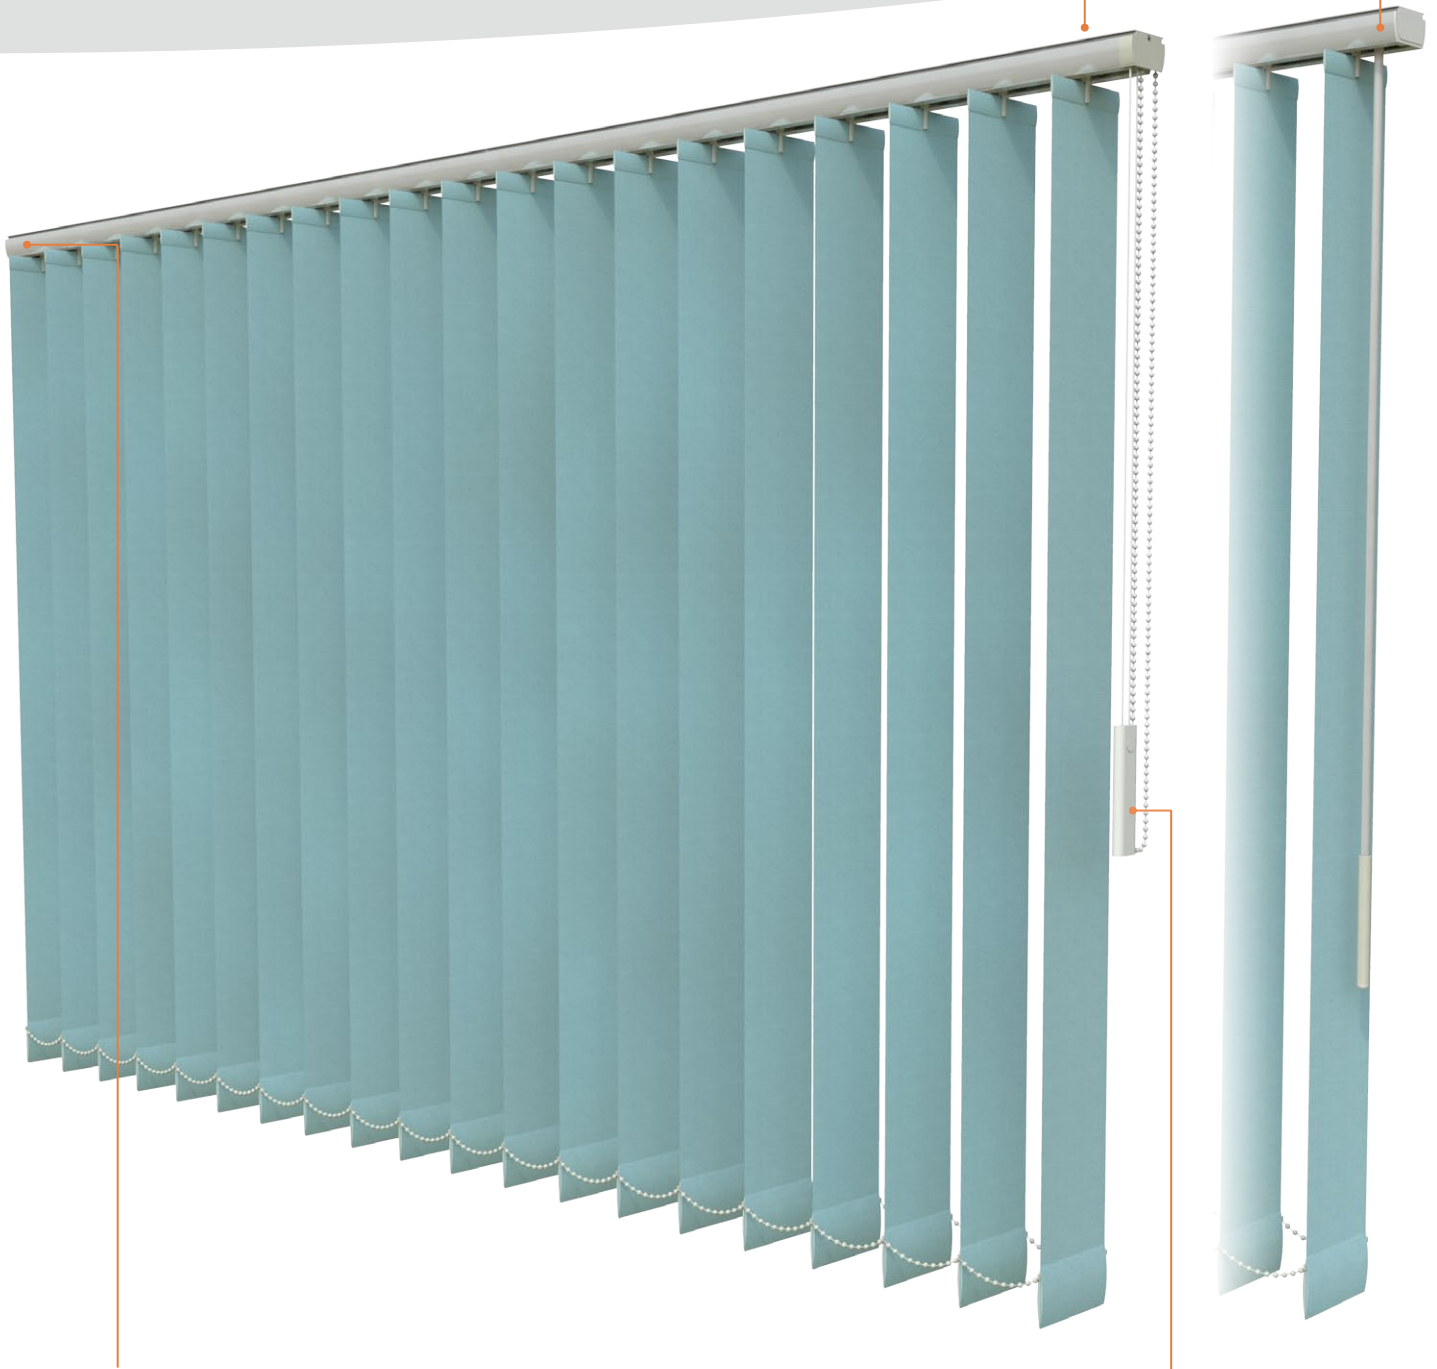

### Child Safe

Specify with confidence, knowing that decor 150 is compliant with the revised BS EN 13120:2009 + A1:2014 standard.

**Wand Operation**  
Lightweight and simple wand operation is inherently child safe and suitable for mental health environments.

**Chain and Cord Operation**  
Classic operation method with a continuous chain loop to rotate the louvres and a cord to traverse them sideways.

**Wide Bodied Headrail**  
Heavy duty profile and wheeled louvre carriers work smoothly and quietly even on the largest blinds.

**Bead Chain**  
Tough nylon bead chain for years of trouble free operation.

## FABRIC TYPES

The fabric is the most important part of a blind. decor 150 vertical blinds are available with a wide range of fabrics to suit your requirements. Some fabrics have anti-microbial treatment, solar reflective coating and recycled content – see our website for the full range. Below are the three main fabric types.

### Blackout

These fabrics are made from opaque material to give zero light transmittance. Suited to applications requiring maximum light exclusion such as conference rooms, bedrooms or south facing facades

### Glare Control

These fabrics are typically close-woven synthetic yarns, which provide total privacy and diffuse the direct sunlight to create a comfortable environment for reading and using computers.

### Screen

These fabrics all have an element of openness in the weave, making them ideal for large areas of glazing where they help attenuate the light without losing visual contact with the outside world. Ideal for open plan offices, atria and circulation spaces.

## OPERATION TYPES

### Chain and Cord

A chain loop rotates the louvres and a nylon cord traverses the louvres.

### Wand

A single wand twists to rotate the louvres and draws across to fully open the blind.

## ANTI-LIGATURE

### Wand

For high risk mental health environments, the blind can be mounted with break-away magnetic brackets, to prevent patient self-harm.

## LOUVRE WIDTHS

### 127mm

127mm wide louvres are more cost effective for large windows.

### 89mm

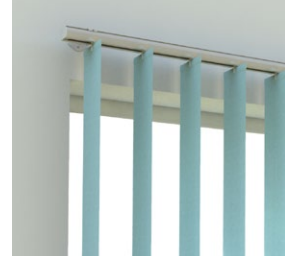

89mm wide louvres are suited to smaller windows, or where the recess is too shallow for 127mm louvres.

## MOUNTING OPTIONS

### Top Fixed

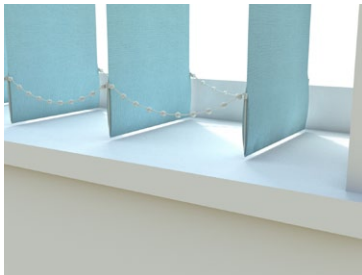

The most common scenario, suits a typical window recess.

### Face Fixed

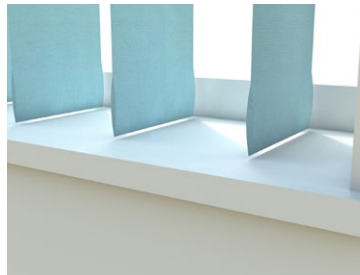

Used where the window recess is too shallow or has obstructions such as window handles.

## LOUVRE OPTIONS

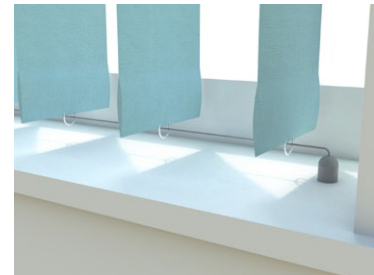

### Standard

White ballast chains link the louvres together to keep them from tangling up.

### Sealed Weights

Used in high-risk environments such as mental health where chains would be a ligature risk. The louvre weight is permanently sealed in to the bottom pocket.

### Wire Guided

Specially developed for natural ventilation systems, the taut metal wire keeps the louvres in order even when the windows are open.

## HARDWARE FINISHES

### White Powdercoated

Clean and clinical

### Brown Powdercoated

Rich and warm

### Silver Anodised

Cool and contemporary

# Technical

## CONFIGURATION

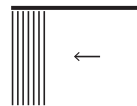

Straight

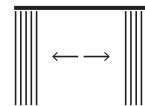

Curved on Plan

Ideal for Bay Windows

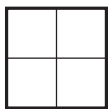

Single Stack

All louvres draw to one end.

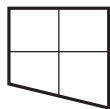

Split Stack

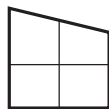

Louvres split into two equal stacks.

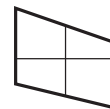

Rectangular

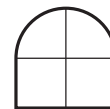

Level Head,  
Sloping Cill

Sloping Head,  
Level Cill

Sloping head  
and Cill

Arched Head
