Delta Dual V3 Sump

By Delta Membrane Systems Ltd

Detailed description

A packaged pump station designed to collect groundwater through the clear opening in the top of the chamber and/ or via a Delta perimeter channel system or via a series of drainage pipes through the side inlets of the sump, (Ref: Delta detail 129).

Product guidance - As Standard

Features:

- Designed for applications where running water is present or expected.
- The package comprises of two DELTA V3 pumps set at different levels to act as duty assist or duty standby.
- All internal pipework is preassembled within the chamber including non-return valves and a gate valve for isolation purposes.
- The delivered package only requires the connection of two unions to complete all the internal pipework.
- Designed for the collection of water from light wells.
- The packaged pump station can also collect grey water from sinks, showers, washing machines, and dishwashers but not foul water from a WC.
- The side inlets also provide a useful means of collecting water from restricted areas by means of 110 mm drainage pipe set in the floor design, level with the slab.
- The station comprises of two DELTA V3 pumps, with floats set at different levels to act as duty assist or duty standby.

Options

Accessories:

- A high level alarm is a recommended extra.
- Delta Power-Pack, (emergency power back-up).
- Textmax telemetry system.
