

# AlertMaxx

## OVERVIEW

An innovative, independent high level alarm normally powered by 240V with battery backup in case of power failure. In it's basic format it is easy to install requiring just two fixings and connection of mains power and float switch.

Status for All OK, high level alarm, previous cancelled alarms, mains failure & service required are clearly displayed via simple LED language. Volt free contacts are included as standard where connectivity to building management systems is required.

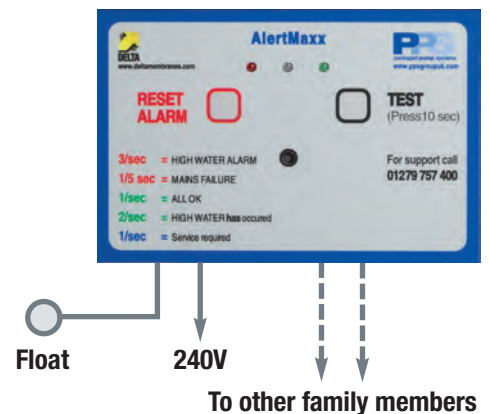

As an option a cable can be supplied to download the internal log from AlertMaxx to either a PC or iPad showing all events that have occurred in the past.

**AlertMaxx** is available to suit two applications;

- **Foul water** - AlertMaxx is supplied with a robust & reliable pendant type float switch to be fixed to pipework, pump or free hanging utilising a float weight (optional extra) to allow correct operation. Order code DMS 269
- **Ground water** - AlertMaxx is supplied with a 'broken finger' float switch. This gives accurate operation and allows an alarm signal to be given after pump one fails, leaving pump two (where fitted) to operate. Order code DMS 270

## FEATURES, FUNCTIONS & BENEFITS:

- Simple installation
- Audible & visual warnings
- Battery backup in case of mains power failure
- Service reminder
- Talks to other products in the Maxx family
- Contains a retrievable log

AlertMaxx mains powered / mains independent high level alarm, including volt free contacts and down loadable logging function.
