Industry leading smart
access solutions

dormakaba Group

Your trusted partner for smart and secure access solutions

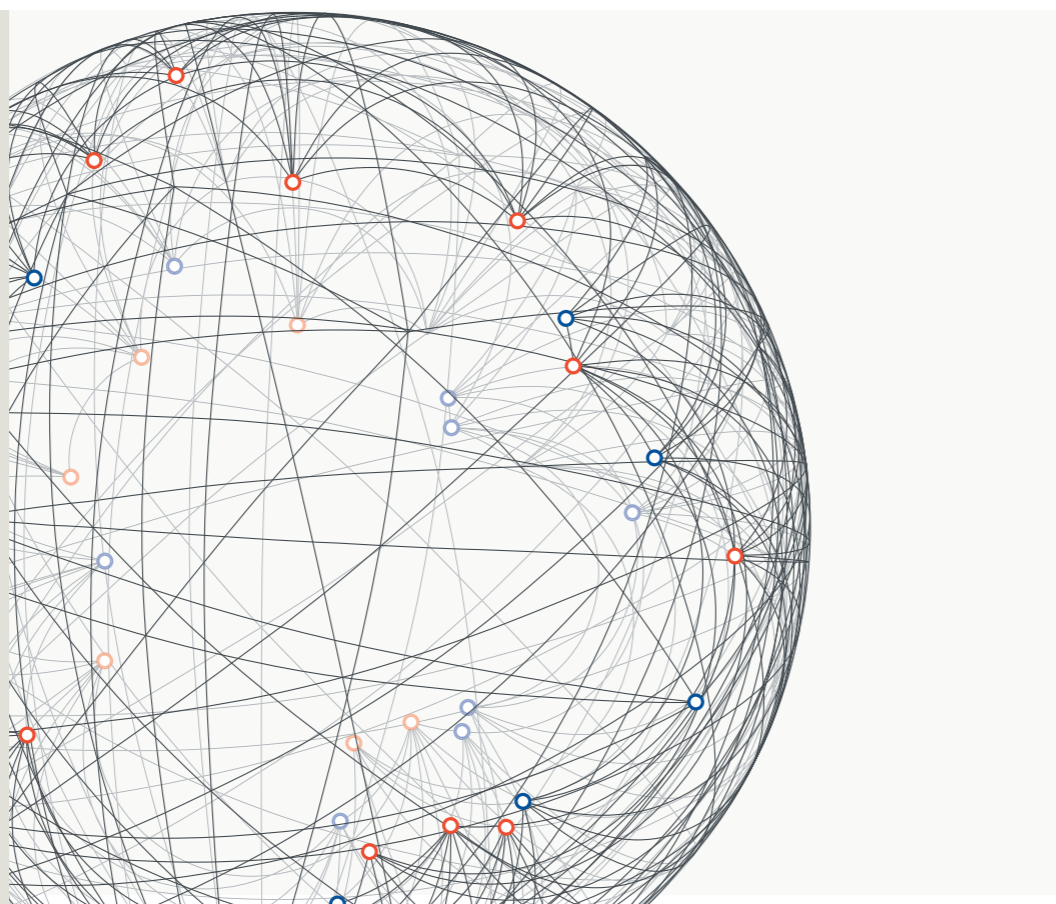

dormakaba - a smart step for smart access solutions. Bringing us one step closer to our goal of offering customers and partners a comprehensive range of high-quality solutions for security and building access from a single source across the globe.

The satisfaction of our customers and partners is our top priority. We make sure that we understand your day-to-day challenges and your requirements.

Everything we do is oriented towards developing seamless access solutions and services, not only making buildings smarter and more secure, but also giving you the feeling of being in a safe set of hands. With around 16,000 employees who are there to offer you reliable, expert advice, we continue to be a trusted, long-term partner. As an established group of companies we bring

together over 150 years of experience. No matter where you are, if you need innovative, reliable access and security solutions, we are there for you with our high-quality offering – in hotels, shops, sporting venues, airports, hospitals, at home or in the office. All over the world.

Our portfolio includes solutions to serve all requirements: locking systems with cylinders and locks, networked electronic access controls, physical access and automatic door systems, a comprehensive selection of door hinges, fittings, closers and stoppers, as well as key blanks and key-cutting machines. This extensive range is complemented by products for time and enterprise data recording, high-security and hotel locks, horizontal sliding walls and movable partitions.

Our locations

Wherever you are, throughout the world

We are one of the top three companies in the global market for access and security solutions. A single source for everything related to doors and secure access to rooms & buildings.

With around 16,000 employees and numerous partners, we are there at your side in over 130 countries. That means wherever you are in the world, you can profit from future-orientated solutions that give you the feeling of long-term security.

Our history

Trade Associations & Governing Bodies

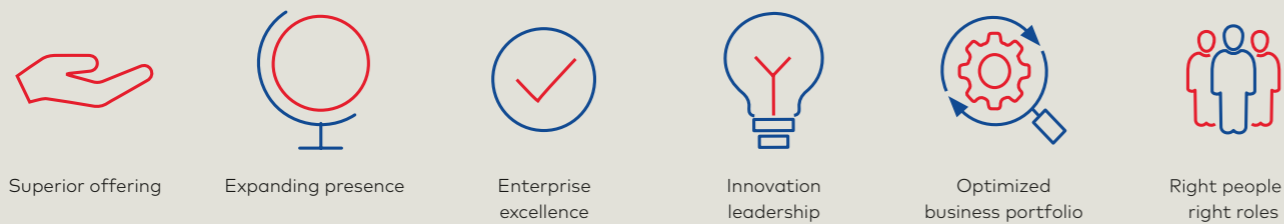

Sustainability

As a company, dormakaba has stood for innovation, safety and reliability for more than 150 years. We want to continue this tradition, and sustainability is the key to doing so. For us, sustainability means acting responsibly on an economic, ecological and social level. By getting the right balance between commercial success, environmental concerns and human needs, we put ourselves in a

better position for the future and create trust in our business activities.

Sustainability is embedded in our corporate strategy, ensuring the company remains properly focused for the long-term, providing an important foundation for future development.

Global brand power

Sustainability

Sustainability and global brand power support dormakaba's six strategic pillars in its ambition to become the trusted industry leader.

Service

Tailor-made services and customised maintenance – for the long-term functional integrity of all access and security solutions.

A reliable partner

In the UK & Ireland, we are a £80M+ organisation, with 180+ skilled engineers to support our installations and service contracts. We have many years experience of delivering large-scale and complex projects.

Rest easy

When you choose dormakaba, you are supported by a nationwide team of local, accredited and fully trained engineers throughout the UK & Ireland, 24 hours a day, seven days a week.

Our specialised service covers access control systems, lodging products, access & workforce management, security doors, barriers, automatic doors, manual door closers, industrial doors, gates, dock levelers and roller shutters, to offer you a complete solution from front to back of house.

Quality assurance at every step

dormakaba UK & Ireland operate a mature and comprehensive quality management system that has been consistently certified to BS EN ISO 9001:2015 for many years. Our high standards and commitment to all aspects of Health and Safety are recognised by the achievement of ISO OHSAS 18001:2007 and our commitment to the environment with BS EN ISO 14001:2009.

Mechanical Key Systems

Reversible Keys

Ultimate key control combined with high levels of physical security.

Serrated Keys

Highly secure and flexible with proven security technology.

dormakaba reversible milled key systems offer the quality, durability and reliability needed in highly sensitive applications that demand premium security products with industry leading credentials. All our patented and registered mechanical key systems can be supplied as individual differs or form part of a large and complex master key plan. They are kitemark approved to BS EN 1303 standard.

Having gained a blue-chip customer base in many stringently operated & legislated industries, dormakaba's key systems are chosen by many security professionals because our locking system and related keys are registered directly with dormakaba. Therefore, replacement keys and cylinders can only be ordered by authorised personnel. This guarantees that the system owner retains complete control over their locking system and associated keys, maintaining the integrity of the system.

Products

- Kaba 20 key system
- Quattro pluS key system
- experT key system
- Padlocks & Enclosure locking
- Camlocks
- Cabinet & Furniture cylinders and locks
- Keyswitches
- Available in a range of architectural profiles
- Dust covers & accessories
- Coloured keycaps
- Can be integrated with electronic access control

dormakaba offer a comprehensive range of serrated keys, with profile and key control options depending on the customer requirements. Cylinder locks with serrated keys use long-proven security technology and are very cost efficient. dormakaba serrated key systems provide high flexibility and large keying capacity. Patent protected key blanks, may only be produced by authorised dormakaba dealers. The serrated key features protect dormakaba systems against illegal key copying, drilling, snapping and even against the bumping method. This puts them among the most secure lock cylinders available on the market.

The serrated key systems can be used in all types of cylinders and can be integrated with electronic access control. dormakaba cylinders are extremely reliable in almost any environment, from a residential application to an educational facility or an industrial manufacturing site, due to the use of high quality components and manufacturing standards.

Door Hardware

Long-life, attractive door technology solutions – for greater on-site convenience, easy assembly and reliable functionality from a single source.

Our comprehensive range of door closers, locks, door furniture and emergency exit hardware offers premium design quality for build longevity and compliance. Correct specification of door hardware is critical, to meet the requirements of fire and access regulations and reduce maintenance costs.

Creating openness and trust down the supply chain, dormakaba provides third-party torque curves for all door closers to demonstrate their opening forces. Helping doorsets meet the requirements of BS8300 and Approved Document M, (Section 3 in Scotland, Part R in Northern Ireland). For additional peace of mind, our products are CE Marked, fire tested and third party approved by CERTIFIRE to ensure that they are fit for purpose.

Products

- Door closers (rack & pinion, cam action, slide arm and concealed)
- Floor springs and transom closers
- Locks (mechanical and electric)
- Access control
- Levers and pull handles
- Panic hardware and exit devices

Glass doors, revolving doors, garage doors, sliding doors, and all other types of entrances, have different requirements. The existing building infrastructure will also play a part in deciding what will be the easiest and most cost-effective way to install access components. We offer solutions tailored to every situation with our diverse portfolio of access managers, door control units, readers and registration units.

Standalone electronic locks are quick and easy to install, without the need for hard wiring, whilst reducing installation costs. The locks are convenient to use as one type of media can open many doors, effectively forming a standalone access control system. dormakaba provides a comprehensive online access control solution, which not only includes online components, but also manages mechanical master key systems, standalone electronic locks, and security

doors. Moreover, dormakaba access control solutions integrate with intruder systems, alarm systems and CCTV. dormakaba's workforce management solutions, including time-and attendance terminals, offer a dynamic cost-saving potential. With proven integration into leading ERP, HR and business management systems such as SAP, AX, Oracle and PeopleSoft, dormakaba offers unprecedented capabilities to enhance security measures and improve workforce productivity, while reducing administrative burden and operation costs.

Products

- Update terminals
- Programmers
- Desktop readers
- Shop floor data collection

Electronic Access & Data
Electronic access control and workforce management – for efficient access management, security and data collection.

Interior Glass Systems

High-quality system solutions made from glass – tailor made for a wide range of everyday and office applications.

With a comprehensive range of high-quality glass fittings that offer outstanding technical functionality and elegant design, dormakaba enables the customised creation of any conceivable toughened glass construction, limited only by your imagination.

Minimised fittings are designed to maximise the appeal of glass, and a choice of co-ordinated finishes allows the blending of glass architecture into any design interior or exterior.

Glass door systems allow an elegant transition from one room to the next, in single action or double action pivoting, or space-saving, sliding door configurations. For further minimalisation of hardware, the dormakaba MANET range of single-point countersunk fittings give a robust and industrial feel to interiors, allowing for the creation of large expanses of glass.

For compelling and flexible shop front and restaurant entrances or internal meeting areas, movable sliding or folding glass walls enable layouts to be tailored with ease.

Products

- Fittings for glass swing doors
- Fittings for glass walls and assemblies
- Sliding glass door systems
- Sliding and folding movable glass partitions

dormakaba lodging systems are designed to increase operational efficiency, whilst providing total control throughout your property. From independent guest hotels to hotel chains with over 1000 bedrooms, our access management systems with online capabilities, promise to enhance your guests' hotel experience. For complete ease of check-in, guests are sure to enjoy the modern convenience of our mobile access solution operating with our RFID electronic locks. Finally, our full-range of perimeter controls augment hotel locking systems to manage employee back-of-house access. dormakaba provides Saflok and Ilco electronic locking solutions.

dormakaba electronic hotel locks personify an unwavering commitment to deliver innovative solutions designed expressly for the lodging market to ensure fast and easy operation for front desk staff and other personnel. All our RFID locks are mobile access compatible allowing guests to access their room using a keycard or mobile device. Smart room automation is another key benefit realised with RFID contactless technology, ideal for hotels seeking to enhance guest convenience.

Products

- Mobile access solutions
- Electronic hotel locks
- Access control systems
- Front desk software solutions

Lodging Systems

Hotel locks, including locking systems, and cloud based (SaaS) applications, as well as access management solutions for holiday homes – reliable and convenient.

Be it money, valuables, important documents or even sensitive goods that require protection from unauthorised access, dormakaba has safe lock solutions to meet your needs. We offer an unmatched safe lock portfolio for automated teller machines, gun safes, vaults, classified information containers, fire safes, and all other variations of secure storage. We keep your properties secure in all ways with certified quality products.

The product portfolio extends from purely mechanical key and combination locks to sophisticated electronic and dual credential high-security locks. Our safe locks meet the very latest standards; tested to BS EN 1300 they provide customers with security and peace of mind.

The Axessor series electronic safe locks are intelligent motor-bolt locks with integrated in/ output terminals, used to connect to alarms, biometric readers or existing access control systems. Furthermore the Axessor safelocks can be networked via the LAN/WAN, or operated in One Time Code, with multiple time lock

Safe Locks

Security locks – for optimal protection of goods, valuables, information or hazardous substances against unauthorised access.

functions, meeting all client expectations and incorporating the latest technology. As a fully redundant Safelock, used on high security safes and vaults to provide maximum reliability, the Paxos advance IP provides the ultimate Safelock for security and peace of mind. In addition, the locking system can be remotely monitored and configured via an IP network with the AS384-NETW programming software.

Products

- Electronic combination safe locks
- Mechanical combination safe locks
- Dial & ring combination safe locks
- Mechanical key safe locks
- Safe lock bolt works
- Safe lock components

Entrance Systems

Automated access solutions – for convenient, automated building access.

Superlative first impressions start with a welcoming and efficient entrance. From airports to residential buildings, entrance systems manage, restrict and control physical and electronic access. Whether you are looking for a statement entrance allowing the free flow of visitors, or a highly controllable security door with personal interlocks for high level protection, dormakaba offers a comprehensive range of entrance doors, turnstiles and personnel gates.

As the largest trusted provider in the industry, dormakaba offers the complete range of automatic doors, with sliding, swing, curved, and space-saving operating options, manufactured to the highest standards, and your exact requirements.

When incorporated into the building façade, dormakaba's revolving doors provide an energy efficient solution, thanks to their thermal separation. They can also feature access for people with reduced mobility, an emergency escape function, integration of manual or motor-driven night shutters, and much more. For the organisation of high security personnel access, dormakaba's security revolving doors and personal interlocks can be used to electronically control access and enhance security where required. They are typically installed at protected government facilities, sensitive areas of

industrial buildings, banks, IT Centers, airports, power plants and military facilities. Our turnstiles provide reliable, fast and user-friendly controlled entry, tailored to your throughput rates and security settings. Compatible with access control and time and attendance recording systems. Suitable for private and public facilities, they are compatible with virtually any ticket management system, from plain bar-code tickets and cards to VIP passes with biometric features.

- Revolving doors (manual and automatic)
- Security revolving doors and turnstiles
- Circular sliding doors
- Tripod barriers
- Half-height turnstiles
- Half-height sensor barriers and gates
- Personal interlocks
- Reader posts
- Personal guiding bars

The digitalisation of dormakaba

At dormakaba we are committed to investing in research and development, so that we stay at the forefront of the industry's digital transformation. This can be seen throughout our product portfolio with our innovative web-based and mobile access solutions.

exivo is a web-based access solution for small and medium-sized businesses. It allows users to easily plan, configure, individualise, and install an access system and then assign access rights dynamically. The solution runs on a central cloud-based platform and is designed for mechanical as well as electronic applications. With exivo networked access system, dormakaba is developing from a product manufacturer into a service provider, creating a forward-thinking business model of software as a service.

dormakaba's Mobile Access solutions offers state-of-the-art technology to securely issue, revoke and update digital credentials on mobile devices such as smart phones, tablets and smart watches. Using best-in-

class Legic connect technology, these credentials can be used across dormakaba's line of RFID and BLE access control products to access hotel rooms, residential units, university accommodations and other protected facilities.

evolo smart is the simple upgrade from a key and lock system to a flexible and secure electronic access control system. The system can be programmed using just a smart phone with most of dormakaba's components being an easy retrofit option. By installing evolo's digital locking components, a mechanical locking system can be easily upgraded to an electronic access control system. This enables the added benefits of instant programming, time limited access and audit trails.

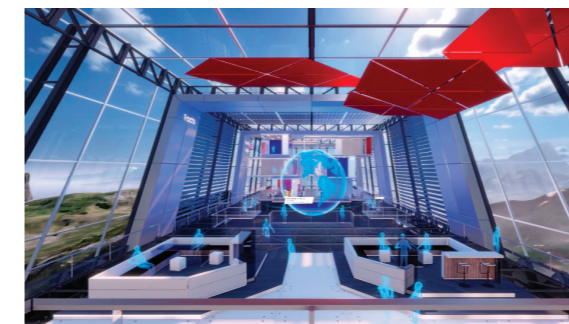

Digitalisation is not only visible through our product portfolio, but also through our communication strategies.

How we communicate is becoming as important as what we communicate, and the introduction of different channels, such as virtual reality (VR) and social media, is key to our continual improvement.

dormakaba 360° City

We are continually developing our 360 city app which is the gateway to dormakaba's product portfolio, illustrating a visual example of applications and solutions that can be used within a multitude of environments. Available on the App Store for Apple smart phones and tablets and the Google Play Store for Android devices.

Virtual Reality (VR)

The dormakaba "Virtual Design Center" is a fully immersive virtual reality world, in which visitors can get to know the new company dormakaba, and its range of products, virtually. Also, incorporated within the dormakaba 360 city app is a virtual reality function, in which you can walk through the app scenarios and learn what dormakaba can offer for you.

BIM (Building Information Modeling)

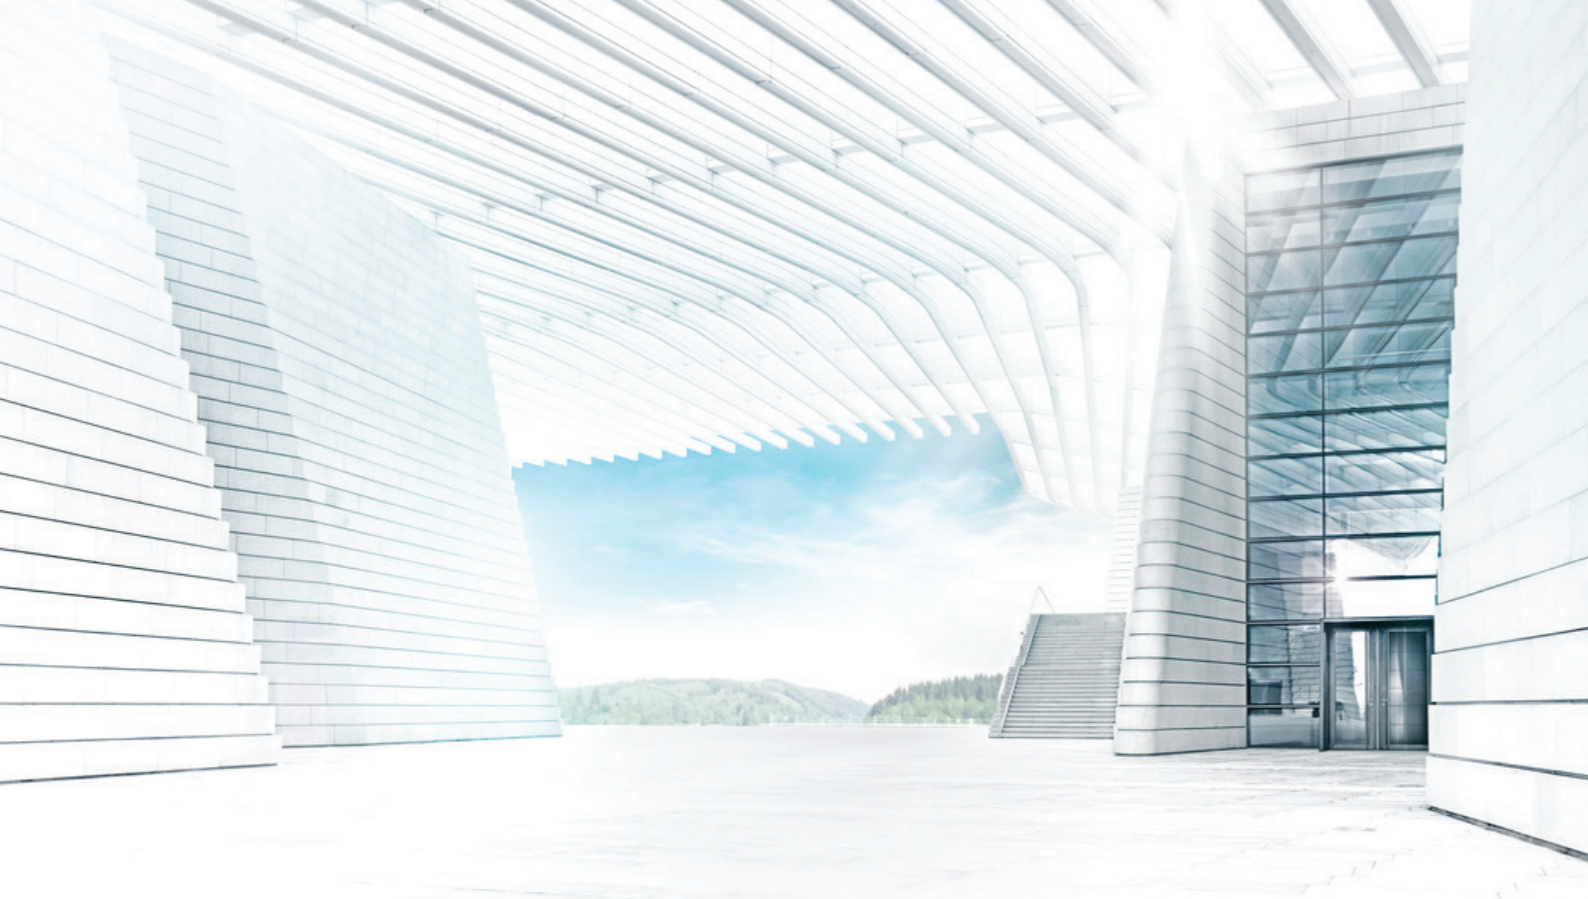

We would not be meeting our commitment to the digital transformation within our industry, if we did not invest, research and support Building information modeling (BIM). We provide up-to-date, reliable and precise product data for the planning, construction and management of buildings. At dormakaba we currently have over 60 models available which can be downloaded from our website. We are heavily invested in continual development of our range of models, adding new products and ensuring the data is complete, consistent and usable.

Social Media

We are currently active on the following social media platforms: LinkedIn, Twitter, Facebook, YouTube and Google+. We ensure to keep our customers, partners and followers up to date with the latest news, events and products as well as running various surveys and competitions.

Security in Corporate Offices

Offices and commercial environments require secure and compliant access solutions.

Offices and commercial environments require secure and compliant access solutions. In many new-build developments, architects look for hardware that blends into the design of the building and complies with the latest regulations. Meanwhile occupants want security, easy operation, low key-replacement and maintenance costs plus investment security.

Functional, whilst aesthetically pleasing and secure, dormakaba's extensive range of entrance systems, glass doors, partitions and door hardware, meet and often exceed both these requirements.

Whether owner-occupied with long-term requirements or rented on a short-term basis, office spaces need a flexible access control system, where different visitors and regular users can be defined and given access rights depending on their job role and the areas they need to access.

dormakaba offers an intelligent, electronic access control system, which can be combined with either mechanical master-key systems or electronic hardware and readers, in addition to manual and automatic doors, security revolving doors, and staff turnstiles. Coupled with our workforce management systems, dormakaba offer unprecedented capabilities to enhance office security, improve workforce productivity and reduce administrative burden.

Security in Education

Ensure your campus is safe and secure.

dormakaba integrated solutions are widely used by schools, colleges, and universities, to ensure smart and secure access across the campus and within accommodation blocks.

With a vast product portfolio featuring master key systems, electronic access control, security doors and time and attendance management systems, dormakaba ensure the safety and security of staff, students, and their belongings, whilst protecting equipment from theft and vandalism. Anti-bullying policies are also supported using an integrated cashless vending solution.

dormakaba's time and attendance systems improve HR efficiency, by eradicating the errors and costs associated with manually recording data. The entire system is visible at all

- Student & Staff attendance recording
- Entrance systems

times, with reports on who has accessed, where, and when, available at a click of a button. The system will also provide roll-call reports of who is on site in the event of an emergency.

With staff, students, and visitors frequently moving around the site, it is difficult to secure external doors. dormakaba revolving doors provide excellent thermal insulation at main entrances, helping to reduce energy costs. All dormakaba doors meet the criteria of both Approved Documents and British Standards.

In most cases, there is no need for extra keys or cards; existing student and staff identity cards can be programmed to operate the installed devices.

- External escape doors and swing doors
- Turnstiles and barriers
- Time and attendance terminals
- Manual door closers and furniture
- Glass doors and partitions
- Security doors
- Nationwide, 24 hour repair & maintenance services

Security in Healthcare

Providing a secure yet accessible solution.

Healthcare establishments represent a complex physical environment, with numerous internal and external entrances to departments and areas used by staff, patients, suppliers, and visitors that require different levels of access control.

The risk of theft, vandalism and attack to visitors and staff, are unfortunately daily threats for consideration in healthcare facilities. These risks can amount to material loss, damage to reputation, litigation and, in extreme cases, loss of life.

By virtue of their function, it is likely that healthcare facilities have a higher proportion of physically weakened and disabled users coming through their doors than any other type of building. It is therefore crucial that the selected door and access products are the correct grade and quality to comply with healthcare design guidance, in addition to Building Regulations, to enable fire safety, security and ease of access for all. An appropriate maintenance programmer is essential for the sufficient service and maintenance of any investment.

At dormakaba we develop and manufacture a wide range of security and door products that provide a safe and secure environment. Meeting all of the requirements for the facility, our comprehensive access control systems, combined with security doors, automatic doors, fire doors and time-recording devices, ensure optimum security and efficiency without compromising people's movement. Moreover, they integrate well into the hospital management system (HMS) including fire alarm, workforce and contractor management systems.

dormakaba offering to healthcare organisations

- Automatic doors and entrances
- Fire door and emergency egress hardware
- Electronic access control & data
- Mechanical key systems
- Push button locks that need no keys, for restricted zones
- Time and attendance terminals
- Security doors to separate restricted zones from public spaces
- Consulting, engineering & installation services
- Nationwide, 24 hour repair & maintenance services

Security in Airports

Door and security systems are continuously in operation and need to function with absolute reliability.

Security requirements at airports have both increased and become more complex in recent years. The purpose is to prevent terrorism, while improving slot management and optimising passenger flow without compromising safety. At the same time, architects and planning teams are constantly striving for an open, welcoming environment.

dormakaba offers specific solutions to help achieve these objectives. Our automated border control systems support airport staff in checking passports. A sensor barrier with integrated interlock functionality and biometric verification helps prevent fraudulent use of passports and speeds up border controls. dormakaba self-boarding units at gates support airport staff in checking boarding cards whilst speeding up the boarding process. The sensor barrier with automatic swing panels features an integrated boarding card reader, a display for passenger information and a printer for seat imprint. dormakaba offer an extensive pre-sales advice service and highly-acclaimed professional installations, along with regular maintenance and rapid service response, which each equally contribute to the all-around, carefree package dormakaba offers to its customers.

dormakaba's one-way corridor was developed to control the transfer of passengers arriving at the air terminal, allowing for fast, safe passage from air to land side. Automatic doors provide the perfect solution for exit points from the baggage reclaim, while sensor barriers offer access for people with

dormakaba offering for Airports

- Entrance systems
- Turnstiles and barriers
- Time and attendance terminals
- Manual door closers and furniture
- Glass doors and partitions
- High security key systems

reduced mobility and high throughput rates, ensuring maximum safety for all users.

Our comprehensive electronic access control solutions and mechanical locking systems can be customised to suit security identification display areas (SIDA), secured and sterile areas, and operational spaces, while dormakaba's time-recording systems help improve staff productivity. dormakaba's access solutions in the form of automatic sliding doorsets, emergency exit, and escape route systems, ensure that pedestrian traffic in this busy hub flows smoothly and safely from terminal to terminal.

Airports have highly complex access control requirements. They have a very high demand for security as well as convenience. Large numbers of employees and sub-contractors pass through. Yet, passenger flow requires specialist solutions due to the bulk of people entering through few doors, many of which must be controlled by ticket, identity or biometric attributes.

Access points in these large and spread out facilities need to be controlled 24 hours a day. Operation and maintenance need to run smoothly and deliver high levels of security. Herein lies the problem – easy to use for operators and employees yet difficult for those who try to access unauthorised. CardLink, dormakaba's access management software leaves none of these issues up in the air.

Security in Retail

Keeping you open for business.

The retail environment usually operates two distinct areas; the shop-floor, which requires inviting door entrance systems with ease of access for all under the Equality Act, and the back of house, with its restricted zones in warehousing, cash-handling and deliveries.

dormakaba can help you create the right doorways for each scenario, and manage the movement and access of customers, employees' and visitors across the full retail spectrum, for increased security and stock protection.

We can advise on your duty of care to provide a safe building environment, considering access, fire and security for public outlets. As the largest manufacturer of entrance systems, we work with you to meet your design requirements, achieving a safe and secure retail environment fitting with your corporate design and aspirations. dormakaba works in partnership with many

- Time and attendance terminals
- Manual door closers and furniture
- Glass doors and partitions
- High security key systems

leading retail organisations to create solutions using both standard or bespoke products, which can be used in the high street, shopping centers, and individual retail outlets.

For restricted access zones, dormakaba's range of push button locks, safe locks, access control, and workforce management solutions, are used extensively in the retail sector. These individual products reflect the diversity of our portfolio, but represent only a part of the product range that dormakaba can fully integrate. We form complete solutions designed to keep employees and items safe and secure.

To keep your business open, safe, and operational to customers, dormakaba service will support you with our nationwide team of accredited engineers, available 24 hours a day.

Security in Rail

Keeping the rolling stock infrastructure secure.

dormakaba, as a member of RIA and Achilles RISQS, developed a range of products and solutions specifically designed for the rail industry.

We offer industrial locking and security solutions for rolling stock and track side infrastructure, as well as a broad range of access management products for railway stations, depots, public areas, staff and corporate offices.

Designed to operate with optimum reliability in some of the most challenging environments, dormakaba's key systems are chosen by many rail industry professionals because the locking system and related keys are registered directly with dormakaba. This ensures replacement keys and cylinders can only be ordered by authorised personnel. Therefore the system owner retains complete control over the locking system & associated keys and thus the integrity of the system.

dormakaba offering to the Rail Industry

- Mechanical key systems
- Key switches
- Padlocks and enclosure locking solutions
- Electronic locks
- PowerPlex 2000 series
- Door operators
- Door closers
- Sliding walls
- Sliding door systems
- Door hardware
- Mortice locks
- Nationwide, 24 hour repair & maintenance services

As an organisation, we supply into both the rolling stock and infrastructure markets of the rail sector, supplying security mechanical locks, keys and key switches to the majority of the UK's train rolling stock. Applications include door controls, CCTV DVR and ETCS enclosure access panels, electrical cupboards, on board critical equipment enclosures and areas that are a health and safety risk such as pantograph isolation switches. Our cylinders and padlocks are widely used on track side to secure signaling equipment, network and communications cabinets, as well as access points track side, and station and depot doors.

Alongside its work on locomotives and rolling stock, dormakaba also offers the unique self-powered Powerplex 2000 series of electronic locks, for customers seeking a high quality access control solution, with next to no maintenance, for use in remote applications.

Security in Banking & Finance

Providing highly secure but discreet solutions.

Financial institutions work in a complex environment, providing secure public areas for customers and staff as well as highly secure back room facilities for cash and private documentation.

dormakaba offers a bespoke range of reliable high-security products for the protection of valuables and personnel, as well as the safe transportation of cash and documents. Our access control systems integrate locking devices, security doors, time-and-attendance terminals, alarm systems and CCTV to provide a seamless security solution.

Our electronic safe lock, Cencon is ideal for ATM machines. It is designed to combat insider theft, through the combined use of lock hardware, systems software and Smart Keys™. Cencon offers total access control and accountability with its One Time Combination™ feature.

dormakaba offering to financial institutions

- High security locking systems
- Cash in transit
- Safelocks
- Security doors
- Door hardware
- Electronic access control

The One Time Combination is dispatched from a central location and cannot be reused at a later date, thus eliminating temptation. Our environmentally friendly Auditcon is ideal for protecting valuable documentation. Government approved, it requires no batteries or mains input.

The diverse Axessor series safelocks offer LAN capabilities, CIT functionality (One Time Code), and time lock functions. With such a comprehensive range dormakaba have a Safelock for any application.

For protection of cash and sensitive documents on the move, the dormakaba key switch is used not only to control the main doors to a vehicle, but to immobilise the vehicle and activate a distress alarm in the event of compromised occupant safety.

- Workforce management
- Time & attendance
- Push button locks
- Cardlink

- Nationwide, 24 hour repair & maintenance services

Security in Utilities & Telecoms

Robust & reliable high security locking solutions.

As a leading manufacturer of high security locking and access solutions, dormakaba have developed a range of products specifically designed for use within the utility industry.

dormakaba, a member of the BSIA (British Security Industry Association) and Achilles UVDB scheme, have extensive experience in this sector as a provider of robust, patent protected key and cylinder systems, along with high security padlocks, designed to operate with optimal reliability in some of the toughest environments.

dormakaba has a long and established partnership with many of the UK's utility companies, working with them to protect and secure all areas of their business, whether it is their remote sites, telecommunication masts, distribution pipelines, server racks, or even their administration offices. Many of dormakaba's products have been developed following this relationship, designing and

dormakaba offering to Utilities & Telecoms

- Hardwired access control
- Security doors with biometric verification
- Interlock systems
- Cable-free access control for remote sites
- Easy-to-programme electronic locks

testing bespoke products that meet the distinct and demanding requirements specific to this industry.

Threats to this infrastructure include accidents, vandalism, theft, sabotage and even terrorism. Utility companies have to put access security in place not just for centralised control rooms and servers, but also for remote facilities in rural areas, to combat and preserve the integrity of these facilities.

To ensure uninterrupted service, this protection has to be guaranteed round the clock, but staff still need to be able to gain access at any time. The final factor to take into account is that maintenance work often has to be carried out and that the people who do this often change. dormakaba's people, products, and processes, ensure that securing sites is a simple, yet effective task for the customer.

- High security key systems
- Electronic & mechanical coded access
- Padlocks and enclosure locking
- Cabinet locks
- Camlocks & Keyswitches
- Door hardware

Security in Hospitality & Leisure

Secure movement around your building.

First impressions are key, and dormakaba provides many options for creating an inviting entrance and user-friendly, secure access around your building.

As with any public building, ease of access for all is paramount to meet the requirements of the Equality Act, whilst also creating a convenient, safe and secure environment for your customers and guests.

In hotels, short term letting properties, conference centers, gymnasiums, and private clubs, we provide solutions for every door and access control application, while meeting security needs for the management of guests and memberships.

dormakaba provides cost reducing, efficient systems that manage check-in and check-out procedures for hotels. For guest room security, after decades of innovative research and development, dormakaba offers an impressive line-up of network and standalone security systems for electronic guest room door locking and reception management systems, from magnetic stripe and proximity

dormakaba offering to hospitality and leisure

- Revolving doors, automatic doors & turnstiles
- Reception management systems
- Electronic locks
- High security key systems
- Energy saver units
- Push button locks
- Door closers and ironmongery for fire and internal doors

card access to BLE mobile guest check-in and access security. With dormakaba's Mobile Access Solutions, you can turn your mobile device into a service tool, providing a convenient way for a guest to fully control their travel preferences. By integrating secure room access onto mobile devices, alongside available hotel services and in-stay features, dormakaba simplifies travel, enhancing the overall guest experience, while driving revenue and adding value to the hotel brand.

For fire doors, our range of certified and tested door closers, emergency exit hardware, and ironmongery will ensure that guests are kept safe, and that the spread of fire is prevented in accordance with fire building regulations.

Reducing energy use is also an important focus. dormakaba offers products such as energy savers for guest rooms that ensure all power is switched off when guests leave their room. Revolving doors for reception areas and public entrances also provide excellent thermal insulation, helping to reduce energy costs.

- Emergency egress hardware and systems
- Workforce management
- Time & attendance
- Safe locks
- Online & offline access control
- Nationwide, 24 hour repair & maintenance services

Mobile Access Solutions Bluetooth Low Energy (BLE)

Security in Government & MoD

Controlled and audited access.

dormakaba offers fully integrated security solutions which encompass biometric and RFID (radio-frequency identification) access control solutions for government, military and secure sites.

Our patented mechanical key systems offer robust and flexible security with an exceptional level of key control to prevent unauthorised duplication and control of keys. We provide simple key systems to operate one or a group of locks, through to complex master keyed systems covering whole sites. All types of cylinders, padlocks, key switches and cam locks can be incorporated into one master keyed system. The keys can also be equipped with an RFID chip allowing access to areas controlled by electronic locks, Our extensive range of electronic and mechanical safe

and container locks, ranging from key locks through to IP addressable electronic locks, ensures we have the appropriate product for any application, including key boxes, cash and secure documentation. These include the unique Auditcon favored by many government users, not least because of its built generator eliminating the need for batteries.

Our access control and entry systems also ensure personnel safety and security, whilst offering cost saving benefits. Programmed access rights to particular zones ensure you know who has accessed, where, and when. In the event of an emergency, a sophisticated roll-call report shows if all people have been evacuated.

dormakaba offering to the Government & MoD

- Time recording and access control
- Biometric identification
- Patented high security mechanical locking systems
- Electronic and mechanical safe and container locks
- Fire-proof document and data cabinets
- Entrance systems
- Door operators
- Door hardware
- Nationwide, 24 hour repair & maintenance services

Security in Manufacturing

Ensuring your production is safe, secure and efficient.

Correct control and specification of door and access solutions secures the supply chain and can help to reduce costs, increase production safety, security and efficiency.

Manufacturing facilities are typically challenged by high numbers of people using diverse facilities, coupled with multiple shifts and personnel fluctuation. With in-depth knowledge of manufacturing practices, dormakaba offers a bespoke, diverse and comprehensive range of smart and secure access solutions for all types of production facility.

For the specialised area of food manufacturing, dormakaba can assist your organisation with the most appropriate security solutions, helping you to meet the BRC food safety standard requirements for secure storage, traceability and protection of site. This

dormakaba offering for manufacturing facilities

- High-voltage key switches for machinery operation
- Patented, high-security mechanical locking systems
- High-security server rack locking
- Security revolving doors, barriers and turnstiles
- Automatic doors
- Internal door hardware and furniture
- Biometric identification devices
- Personnel time & attendance solution
- Shop-floor data collection solution
- Online & offline access control
- Nationwide, 24 hour repair & maintenance services

includes meeting the challenges of laboratory testing and equipment.

For improved visibility for your most efficient and expensive resource – people, our time recording systems enable organisations to analyse labour costs and account for every penny. Our security protection systems help reduce serious risks such as lost or stolen keys, operation of sensitive equipment by unauthorised individuals, buddy punching, false reporting by subcontractors, and loss of efficiency.

All our systems integrate with the leading ERP systems, including SAP, Oracle, AX and Peoplesoft.

Our products

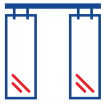

Mechanical Key Systems

Systems that enable access rights and key control to all rooms within the premises

Door Hardware

Solutions for residential or commercial projects

Interior Glass Systems

System solutions made from glass for a wide range of everyday and office applications

Entrance Systems

Automated access solutions for convenient access to buildings

Lodging Systems

Hotel locks and locking systems as well as access management solutions for holiday homes

Safe Locks

Security locks for preventing unauthorized access to goods, valuables, information or hazardous substances

Electronic Access & Data

Electronic access control and workforce management for efficient access management, security and data collection

Services

Tailor-made services and customized maintenance for long-term functional integrity of access and security solutions
