Compact 12.7mm. The ultimate material choice for the most demanding applications. High impact strength and impervious to water.

HPL 0.8mm. Provides flexibility of design. Bonded to a core substrate with high-strength resin adhesive and lipped with impact resistant ABS edging. Suitable for all dry areas.

Thin HPL & Compact sheets are made of:

≈70% Paper ≈30% Thermosetting Resins

Excellent moisture resistance

Great impact resistance

Scratch and wear-resistant

Light fastness

Ease of maintenance and cleaning

Hygiene

Important characteristics according to the EN 438 classification for HPL & Compact Grade Laminate.

Visual awareness:

To assist the partially sighted, visual contrasts between adjacent surfaces in a washroom environment are necessary. This contrast is measured by the Light Reflectance or LRV value of colours as noted in the Availability table. To ensure that surfaces such as doors are easily detected, the Act specifies that there should, ideally, be clear separation of 30 LRV points between the two adjacent surface colours.

Note: Limitations in the printing process means we cannot guarantee the colour accuracy of this chart. Dunhams can supply actual colour samples on request.
