

After Care Sheet

Ecoscape UK is an easy, low maintenance alternative to timber decking and is ideal for any project big or small. Due to the makeup of our composites they have an excellent resistance against dirt, mold and mildew than comparable decking products. However all exterior building materials require some form of maintenance and upkeep. We recommend periodic cleaning of surface dirt avoiding accumulation to keep you deck in the best possible condition to enjoy year after year.

Cleaning is easy, in most cases just a yearly light brush and hose will be sufficient, alternatively jet washing at a low pressure will improve the life span of your deck. If possible keep the deck clear of debris; regular sweeping of the deck helps to reduce the buildup of dirt on and between the decking boards. Any stains or spillages should be cleaned immediately to minimize the possibility of staining. Wash the affected area with warm soapy water and rinse off with clean water, for more stubborn stains we recommend branded surface cleaning solutions.

For any marking, use light grain sand paper and a gentle rub to keep the surface in mint scratch free condition. **Do not** rub too hard, as this will remove the surface coating compromising the decks slip resistance.

We do not recommend painting or staining your deck, these will not adhere to deck surface and so will flake and peel.

If you have any maintenance issues please get into contact and we will offer our technical support.
