wall linings, bulkheads & reveals

sustainable building solutions

Encasement's approach of providing innovative high quality products at competitive prices, supported by outstanding service, has enabled us to become the fastest growing company in the decorative casings and interior wall linings sector.

In addition to our core products, we have continued to develop and expand our range to meet the growing demand for sustainable building products, including FSC® compliant materials from sustainable sources, which comply with the relevant codes of practice and help improve BREEAM points ratings.

This focus on sustainability is also reflected in other materials we use within our product range. Aluminium is one of the most widely recycled materials and is

used extensively in our Forma column casing and Vecta wall lining ranges together with other sustainable and recyclable materials.

Our range is now the most comprehensive available and is supported by our high quality manufacturing, logistics, installation and customer services, which combine to deliver a complete solution for architects, specifiers and installers working in all aspects of building design and construction.

We're also continuing to develop new products and services to extend the scope even further and enhance our 'integrated solutions' capabilities.

Interior wall linings

decorative & versatile

The Vecta wall lining range is designed as a fully integrated system, which includes decorative panels and a versatile support framework to provide a strong, simple to install and stylish solution to any interior project.

A key strength of the Vecta range is its ability to meet an immense array of interior design specifications in terms of the colour, durability and sheer choice of panel sizes available, to create high quality interior wall lining solutions.

All Vecta wall lining installations are created, designed and installed to the specific requirements of each individual project. This ensures that the layout and sizes of the panels enhance the interior design and provide a fully integrated finish. To achieve this level of detail, our experienced surveyors undertake comprehensive site surveys, which enable us to plan the installation precisely.

Vecta metal linings are often specified in commercial properties for new build, refurbishment and upgrades, where the choice of natural, brushed, anodised or PPC coated finishes offer a high level of versatility. Further design flexibility is provided by Vecta compact laminate wall linings, which can also be specified in a wide palette of colours or incorporate custom images and graphics for unique interior design solutions.

This combination of features and material characteristics has ensured that Vecta compact laminate linings are already used in a wide range of projects in the education, health, commercial, hotel & leisure sectors as well as retail, public buildings rail and airports.

- * Integrated system includes decorative panels and support framework
- * Design, layout & sizes tailored to the requirements of each individual project
- * Wide range of materials and finishes
- * Panels can be formed to follow wall contours
- * Versatile and adaptable to meet any wall lining specification
- * Complete supply & install packages available

Lift lobby linings

interior style & detailing

Lift lobby linings are a fundamental part of interior design schemes and help convey the character and style of the building through the overall aesthetics, as well as the individual finishes and materials selected for each project.

Vecta lift lobby linings offer an excellent solution by providing a range of finishes, designs and configurations to meet the needs of virtually any project, including receptions, foyers and atria together with decorative entrance linings and the creation of feature where aesthetics are a primary consideration.

All Vecta lift lobby installations are created, designed and installed to the specific requirements of each individual project. This ensures that the layout and sizes of the panels enhance the interior design and provide a fully integrated finish. To achieve this level of detail, our experienced surveyors undertake comprehensive site surveys, which enable us to plan the installation precisely.

Already used in a wide range of projects and sectors, including education, health, commercial, hotel & leisure, as well as retail, public buildings rail and airports, Vecta provides architects and contractors with a creative, versatile and stylish system that covers both compact laminate and decorative metal solutions, including brushed aluminium, stainless steel and Rimex textured finishes.

We also offer a supply and install service, enabling us to maintain complete control and provide expert installation on all Vecta lift lobby lining projects.

- * Stylish, practical and aesthetic solution
- * Design, layout and sizes are tailored to the requirements of each individual project
- * Wide range of materials and finishes
- * Integrated system also includes reveals, soffits bulkheads & skirtings
- * Versatile and adaptable to meet any requirement
- * Complete supply & install packages available

Reveals, soffits, bulkheads & skirtings

the finishing touch

Whether the requirement is for extensive services bulkheads, stylish lift reveals or decorative skirtings, the Vecta range provides a highly versatile and adaptable answer.

Manufactured from brushed and PPC aluminium as well as stainless steel and textured Rimex finishes, these decorative and practical solutions have already been installed in a range of key projects in the education, health, commercial, hotel & leisure sectors as well as retail, public buildings, rail and airports.

All Vecta installations are created, designed and installed to the specific requirements of each individual project. This ensures that the layout and sizes of the panels enhance the interior design and provide a fully integrated finish. To achieve this level of detail, our experienced surveyors undertake comprehensive site surveys, which enable us to plan the installation precisely.

As a high quality finish is absolutely essential for interior projects, we pay close attention to the detail and accuracy. All fixings are concealed while corners and folds are welded and dressed to the highest standards. In addition post anodised material is used to avoid the possibility of stress marks and micro-cracking in corners.

- * Wide range of materials and finishes
- * Design, layout and sizes tailored to the requirements of each individual project
- * Comprehensive range to meet diverse specifications
- * Integrates fully with Vecta wall lining solutions
- * Versatile and adaptable to meet any wall lining requirements
- * Complete supply & install packages available

Supply & install

a fully installed solution

Alongside our wide range of products and casing solutions, we also offer a supply and install service enabling us to maintain complete control over the project.

This service can be particularly useful for complex or larger projects or where the installation part of a particular contract falls outside of existing arrangements with specialist contractors.

Our installation packages can be undertaken as a complete 'stand alone' solution, requiring minimal intervention or co-ordination by the main contractor and can be delivered within a flexible schedule of work to integrate with the contract programme and handover.

All our site engineers and installation technicians are not only highly trained and experienced, but also comply with the necessary on-site safety and construction industry standards for risk assessment and skills certification.

As with all aspects of our business, we maintain high standards, professional working practices and competitive pricing. So if you require a supply only or supply and install service from Encasement, we've got it covered.

- * Flexible working to co-ordinate with main contractor's programme
- * Internal Quality and ITP systems to maintain high standards
- * All installation personnel are CSCS compliant
- * In house H & S consultant oversees safety requirements
- * Trained and skilled installers with more than 30 years of experience
- * Risk Assessments and Method Statements provided
- * Full O & M manual provided upon completion

Scope of finishes

range overview

The choice of finishes within the Vecta range provides a wide palette of colours and textures to meet most specifications and aesthetic requirements, while also integrating with a building's interior design.

The Vecta range encompasses a number of different materials, including compact laminate, aluminium and stainless steel, which also allows us to offer an exceptional range of finishes to meet specific aesthetic needs as well as individual project requirements, such as durability and special forms and shapes.

As the variety of options is so wide, we can provide the perfect solution to meet any design or interior design scheme, so for specific colours, material, applications or finish requirements, please contact our technical team on 01733 266 889.
