

Security Shutters Case Study – *Elephant Park Sales Gallery, London*

Elephant Park Sales Gallery for the new housing development at Elephant and Castle shows how security shutters can be used for company branding and overall enhance the façade whilst protecting the contents of the building.

The temporary building was partially constructed off site and has two windows and a door that include external security shutters. Envioblinds external roller shutters were selected for the project because of the smooth quality finish of the aluminium which allowed the client to spray paint their own artwork.

The motor and roller casing are concealed behind the fascia board, and installed outside all windows and doors to provide out of hours security. Motor operated with a wall mounted switch, these security shutters are easy to use and are locked from the outside to provide maximum security when the building is unoccupied.

This housing development is part of a £1.5bn regeneration project at Elephant & Castle including new homes, over 50 retail outlets and a new park.
