

# THE **NEW** 2-PART **CLIP-ON CILL** FROM PROFILE 22

THE BEST WINDOWS ARE MADE FROM

## Reliable and responsive

We've made a name for ourselves with systems that are highly advanced and trusted by architects, specifiers, builders, fabricators and installers. Our products are trusted because they are reliable, durable and easy to work with.

Over the years, we've built close working relationships with the construction sector. We have listened to concerns, shared ideas, worked on new concepts and brought them to completion. We're still doing that – constantly improving the range and the detail of what we offer.

Our NEW 2-part clip-on cill is the latest result of a long-standing and ongoing process.

THE BEST WINDOWS ARE MADE FROM

## Perfect fit and function

The new 2-part cill is a Profile 22 product. That means it has been carefully researched and only brought to market when we have complete confidence that it's a perfect fit with the other products in our range and that it does exactly what it should do.

## Why choose a 2-part cill?

One of the biggest headaches on a construction site is the potential for damage to cills and the cost of repair if it happens. Often the damage can occur late in a project, and the later it is, the more disruptive remedial work becomes.

Building sites are challenging environments, and not everything can be protected in layers of packaging, but cills are prominent and highly visible. Cracks, scuffs or scrapes are obvious, particularly on doorframes where there is through traffic.

A 2-part cill allows the prominent nose of a cill to be added at the closing stage of a project, when heavy equipment is safely out of the way. The receiver section is built in as normal, ready to have the nose clipped in when the risk of site damage has been minimised.

## Flexibility

One of the biggest headaches on a construction site is the potential for damage to cills and the cost of repair if it happens. Often the damage can occur late in a project, and the later it is, the more disruptive remedial work becomes.

Building sites are challenging environments, and not everything can be protected in layers of packaging, but cills are prominent and highly visible. Cracks, scuffs or scrapes are obvious, particularly on doorframes where there is through traffic.

A 2-part cill allows the prominent nose of a cill to be added at the closing stage of a project, when heavy equipment is safely out of the way. The receiver section is built in as normal, ready to have the nose clipped in when the risk of site damage has been minimised.

## Repairs and alterations

2-part cills have a role to play long after the initial construction period. Years after installation, a cill may be damaged by accident or start to appear unsightly after heavy wear and tear. Now, with our new cill, it's easy to remove the old, tired nose and replace it.

If you're adding insulation to an existing building, conventional cills can be difficult to work around. With the separate components of the 2-part option, that problem is sorted.

## Options

There is a 2-part cill to suit any project or installation. If you want to use them alongside – or with existing – conventional cills, you will find they are a great match.

- PVC-U: 150mm and 180mm sizes.
- Bigger sizes in aluminium are contract dependant
- Optima system compatible
- Works with chamfered and sculptured systems.

## Colours and finishes

Profile 22 offers a market-leading range of foiled finishes, many direct from stock. The choice of 28 colours extends to our whole cill range and, therefore, there is no need to compromise on appearance or style when choosing the convenience and practicality of a 2-part cill.

\* Non grained

## Profile 22 – always practical, always effective

We're inspired by our customers. They are building great things: homes, schools, hospitals, workplaces and commercial premises, often under challenging conditions. If we can make their jobs simpler, we'll do it.

Start to feel the benefit of practical and effective design.
