

FUTURE-FIT LEARNING SPACES

New Pedagogies

Across the globe, evolving pedagogies and the desire for an improved learning experience are influencing the design and equipping of learning spaces right across the campus.

Active learning spaces have been proven to help with student engagement & retention, higher levels of academic attainment and the development of employability skills. Social participation and learning communities, in addition to technology integration also form a key foundation to a well-balanced learning experience.

Lecture theatres are experiencing transformations to realise the demand for flexibility required by both students and lecturers. Provision of future-fit learning environments signal a university's commitment to achieving the best outcomes and highest standards for their students.

Ferco Seating

For over thirty years, Ferco Seating Systems have been designing, manufacturing and installing high quality customised seating for the education sector.

Our intelligently designed and flexible lecture theatre collection has been specifically developed to maximise learning opportunities and outcomes; and enhance the student experience. Ferco products support campus inclusivity, with seats and desks promoting full accessibility for wheelchair patrons.

We believe that lecture theatres are unique spaces where students go to be inspired. The right space can create an immersive experience or generate a world-changing idea. That's why we're so passionate about designing the seating that fills these spaces.

Our range of future-fit seating supports the goals of education establishments in providing robust equipment that enables and supports new pedagogic approaches and facilitates the design and delivery of a rich and engaging curriculum.

Collaborative Wave

Designed to complement evolving teaching methodologies, the Ferco Collaborative Wave is a contemporary seating system created to provide an active learning space and enhance student engagement.

Featuring a pod of five contoured seats set around a unique curved desk, the Wave allows learners to seamlessly participate in both didactic and small group collaborative learning experiences through its innovative design.

Each ergonomic seat moves away from the writing surface and rotates independently on a high strength steel arm – as well as auto-parking when unoccupied; while the curvature of the desk creates a larger working surface than existing configurations and ensures adequate room for maximum productivity.

Turn & Learn

Ferco's Turn & Learn lecture chairs rotate through 360 degrees to enable full collaborative learning and sharing of information between students. This movement of seats creates flexibility for group work with minimal disruption, as well as peer-to-peer interaction in all directions.

Available as an option on both the ARC One and FT10 seats, the Turn & Learn system fitted to our comfortable and ergonomic lecture seating allows large single use spaces to be transformed into versatile multiple use spaces at will.

Creating a venue that is truly multi-functional, Turn & Learn technology ensures a completely future-fit education space in any venue.

Coupled with the Wrimatic writing tablet, the world's leading integrated writing tablet, the Turn & Learn seat delivers functionality, value and a robust learning environment for any venue.

Wrimatic Tablet

Created using patented aeronautical technology, Ferco's A3 Wrimatic Tablet is widely acknowledged as the world's leading integrated writing table.

The award winning Wrimatic employs a unique triangular prismoid swivel joint which permits the stowing or unstowing of the tablet in one smooth continuous action.

Both elegant and simplistic in design, the tablet is large enough to accommodate full size ring binders, course notes or laptops and has been rigorously tested to ensure it stands up to the demands of the modern education environment.

Load tested to 240KG,
the Wrimatic is the
ultimate writing tablet
in terms of size, function
and strength.

Lecture HBS

Developed to support collaborative learning, the Ferco Lecture HBS features an innovative ‘swing away’ pivot arm and auto-return seat.

The dynamic HBS promotes inclusivity and optimises student engagement – creating an environment where didactic and active learning pedagogies can coexist in the same space.

Learning in small groups has been shown to more effectively engage critical thinking and problem solving skills which in turn promotes deeper subject understanding.

The HBS assists universities to achieve their goal of future-fit lecture theatres, where flexible seating can be utilised in a multitude of ways to support teaching methodologies as required.

Tiering

High quality tiered seating is an essential part of the learning experience – the education environment should be one which stimulates interaction and concentration.

Tiered seating is commonly used in a lecture theatre providing students with clear sight lines and an unobstructed view of the lecturer.

Ferco Seating design and install bespoke tiering to fit any client specific design, we have a wealth of experience installing tiering into educational establishments to any configuration; and can adapt tiering to fit different spaces with precise installation on variable and uneven surfaces.

All of our components are manufactured off site to ensure quick and easy installation, as well as maintaining a clean environment. Wood is responsibly sourced from FSC certified suppliers and our steelwork conforms to British standards. Acoustic separation, fire retardant properties and smoke sealing is also available.

We provide tiering options which include the provision for access hatches, air ventilation systems as well as power and data points.

1. Your Space

2. Erection of steel sections

3. Plywood decking & steps

4. Ventilation, power & data

5. Finished layout

6. Completed installation
