WELCOME TO THE FONTANOT HOME

2

I began producing staircases for interiors in the 1970s.

When I “entered” the as yet unexplored world of staircases I had no models of reference.

Artisans were simply asked for an “object”, a functional solution that enabled people to access an upper or lower floor. My goal became that of transforming a “service” into a “product”.

Staircases needed to be industrialised.

What I have always sought to do is to go that step further, looking towards the future.

F

ECO-DESIGN FONTANOT

The importance of the environment is a key issue for Fontanot which designs its staircases taking into account the entire life cycle of the product: eco-compatible products free of harmful substances are used during the production phase and scrap materials are transformed into fuel to heat the company premises.

Three certifications confirm Fontanot's "green" nature:

The A+ LABEL indicates the lowest emission level of toxic substances to safeguard indoor air quality.

FSC® (Forest Stewardship Council® - FSC.org) is the international trademark that guarantees that the wood originates from responsibly managed forests.

CSQ ISO 9001:2008 and IQNet are the tangible results of an effective and scrupulous organisation.

100%
recyclable

Before

RECYCLABLE PACKAGING CRATE

After

THE CRATE BECOMES A WORK DESK

“ Zero
Waste
project ”

Fontanot invented the first “guide” to converting its wood packing crates into original design objects: a bench where you can park your bicycle, an urban garden or a shoe rack you can sit on and store shoes. Wood reinvents Itself taking new forms.
