### Seminar details

#### Specifying curved roof and tensile fabric structures.

Looking at all the issues relating to a range of structures which have in common a curved roof, including timber and steel framed canopies and walkways, tensile fabric designs and curved roof insulated buildings with timber or steel frames.

**Uses** - canopies, walkways, entrance porches, architectural features, plus insulated buildings for use as school classrooms, retail spaces, lecture halls, offices, gymnasiums, etc.

**Design** - how understanding of the curved roof options available can help you to respond to a brief with creative, eye-catching and functional solutions whilst avoiding design nightmares; how applying the most stringent environmental principles and understanding how to get the best from the medium.

**Materials** - what the options are and what to use in which context, including material qualities, life spans and guarantees; plus consideration of procurement with reference to environmental and sustainability issues.

**Rules and regulations** - what you need to know about complying with building regulations, planning issues,

**Fordingbridge** is a specialist construction company with a reputation for the design, manufacture and construction of curved roof structures including canopies, walkways and tensile fabric structures as well as fully insulated curved roof buildings which conform to excellent environmental standards.

health and safety and other considerations.

**Overall aim** - for delegates to feel confident about the issues to consider and options available when commissioning any structure with a curved roof.

#### Duration

45 minutes plus questions  
1 hour in total
