

Introducing **NEW PRODUCTS** to Aiphone's popular GT Series, a versatile security video intercom for multi-tenant applications.

Opportunities to Increase Revenue

New additions to Aiphone's GT Series multi-tenant video intercom will give opportunities to increase revenue.

GT-MCX provides the ability to conveniently update tenant details from a remote location, over the same logical network.

GT-BCXB-N, GT-DB-VN, GT-DMB-N, and GT-MKB-N all use NFC technology, allowing the directory to be revised quickly while onsite.

When building owners and property management firms call your business for these updates, simply apply a small fee to profit on future maintenance. Revisit your customers who have already installed the GT Series. Entice them to upgrade their system to take advantage of these newly added products and security benefits.

The GT Series provides building owners and property management firms one of the most versatile, feature-rich security intercom solutions for multi-tenant applications.

Easy to Accommodate Customers

A variety of stations can be intermixed for the best possible combination to accommodate your customer's needs and requirements. For a single building application, install up to:

- 16 entrance stations
- 4 video guard stations
- 500 tenant stations

Appeal to Enterprise-Level Customers

Now you can appeal to enterprise-level customers who need a multi-tenant intercom solution. With the GT-MCX network adaptor, install up to:

- 480 entrance stations
- 96 video guard stations
- 5,000 tenant stations

Variety of Applications

- Office Buildings & High-Rises
- Apartments & Condominiums
- Student Housing & Dormitories
- Senior & Assisted Living Homes

Simple Bus Control Wiring

All wiring is homerun or looped back to the bus control units, eliminating the need to terminate the wires at the exterior entrance station.

Hassle-Free and Quick System Programming

Your customers will save valuable time by updating their tenant directory from a remote location over a network.

Does the system need to be updated while onsite? With NFC programming, tenant names and dialing numbers can be updated promptly with an Android™ device, saving time and hassle.

Data can then be quickly transferred throughout the system using an NFC-compatible station.

Communication Between Buildings

Building owners and property management firms want to reduce the need for added guard or concierge staff by centralizing their security. With the GT Series, multiple systems can easily be connected over a network for personnel to have building-to-building communication.

An assortment of stations!

Entrance Stations

Your customers want to maintain the aesthetics of their buildings. Aiphone's GT Series has beautifully crafted 3-in-1 and modular style entrance stations.

3-in-1 Video Entrance Station:

- Includes PTZ camera, audio, and access keypad
- NFC programming
- 3.5" LCD screen
- Single stainless steel panel
- Flush or surface mount

Modular Audio or Video Entrance Stations:

- Easy to customize
- Optional card reader or access keypad
- Postal lock modules for mail carriers
- Semi-flush or surface mount

Video Guard Station

Impress customers with the video guard station, which can be used for an added layer of security. With the GT-MKB-N video guard station, their staff can easily:

- Intercept calls to screen visitors
- Control secondary entrances
- Reach tenants as needed
- Connect with personnel between buildings

Tenants can also reach concierge or guard staff in the case of an emergency, even if security is centralized in a different building.

Tenant Stations

Your customer's tenants can defend against unwelcome visitors. With five different station styles, tenants can confidently make proper access decisions by identifying their visitors and communicating with them before unlocking the door.

- Clear visitor identification
- Crisp audio communication
- Convenient door unlocking
