

Clarius®

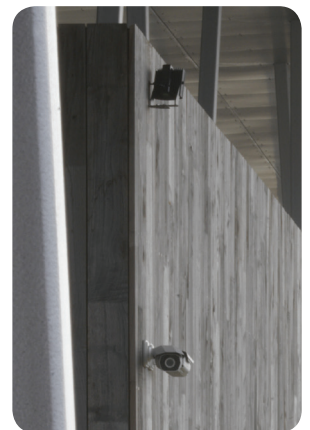

Clarius® Case Study Stonehenge Visitors Centre, Wiltshire

Infrared Clarius® units from ALT protects 'one of the wonders of the world'

Wessex Fire and Security secured the project to supply, install and commission the fire and security systems for the new Stonehenge visitor centre in early 2013.

Three buildings make up the new Stonehenge facility: the main visitors centre, an ancillary building (for all plant, vehicles and machinery) and a hub/security post (the former visitors centre).

The use of the infrared **Clarius®** IM units arose to meet a specific client requirement. Through the course of the equipment verification process the client elected to use Video Analytics and as a consequence they needed to separate cameras from IR sources to minimise insect attraction to the cameras. Wessex Fire and Security looked at a number of product alternatives, but selected GJD due to their previous experience and are really pleased with the equipment performance.
