## An Overview

This Price List has been designed to be as clear and easy to use as possible, whilst also providing a comprehensive set of information for all of our Task Seating products. Below is a brief overview on how to use the document, as well as where to find key information.

### Page Layout

For ease of use, the page layout in this document is consistent throughout. Images always run from left to right across the page, whilst corresponding product information always runs from top to bottom down the page. Uplift Options are always on a blue background, on the right-hand page.

### Product Information Tables

Product Code (\*\* specify your finish)

Generally, seats should allow your body to be comfortable and not restricted. The seat design is critical for this.

#### Seat Height

The Seat Height should never be so high that your legs are left dangling! This can result in pressure on the soft tissues underneath your thighs. This pressure interferes with the return of blood from the lower limbs, which may cause tingling and numbness in the thighs, due to pressure on blood vessels and nerves.

### What Makes a Seat Comfortable?

#### Seat Depth

The Seat Depth should allow clearance at the back of your knees, in order to prevent pressure on the network of blood vessels and nerves.

#### Seat Back

The Seat Back and angle should support the natural curves of your spine – in particular your lower back. The main weight bearing should be taken by your upper legs and the top half of the thighs.

In addition, a chair should enable you to change your posture at intervals, ensuring that different

groups of muscles can be used for support – and that no particular group of muscles gets tired. The consequences of poor seating are discomfort, fatigue and inefficiency in what you are doing.

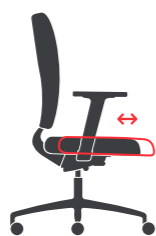

#### Choosing the Right Seat for You

We understand that everyone is unique. To ensure you get the right chair for your needs, we offer a wide choice of Task Seating options allowing you to create your own ideal Task Chair. A range of Uplift Options enables you to specify individual parts of the chair, providing you with a tailored solution to your needs.

#### Seat Height

Gas stem movement and height adjustability

#### Seat Slide

Allows the seat to move back and forth to provide good leg support

#### Seat Back Height

Allows the back height and lumbar support to move up and down

#### Adjustable Arm

Allows you to choose the height of your arm, independent from the seat height

#### PCB Mechanism

Permanent Contact Back rake angle

#### PCBL Mechanism

Permanent Contact Back rake angle, with body weight tension control and free float option

#### AS Mechanism

Asynchronous Mechanism with independent levers for back rake angle, body weight tension control, and seat tilt angle

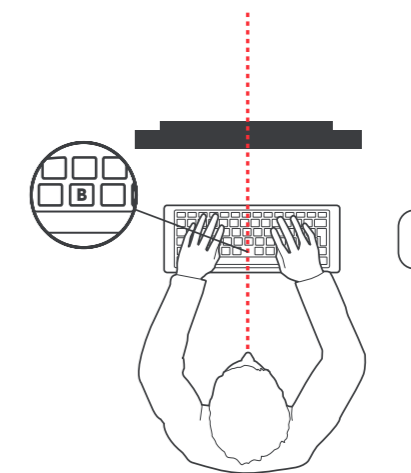

#### SN Mechanism

Synchronous Mechanism with movement in ratio of 1:2, and body weight tension control

#### Chair Setup

Ensure that your Chair is set up correctly (as per the instructions supplied), and that you are seated at the correct height in relation to your workstation.

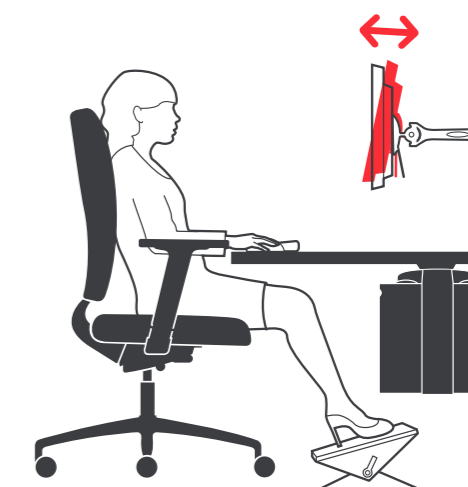

#### Computer Monitor Position

Your Computer Monitor should be placed directly in front and facing you, so that your body and neck aren't twisted when looking at the screen.

#### Computer Monitor Height

Place the Monitor at a comfortable viewing height that doesn't make the user tilt his or her head up, or bend their neck down to see it. For a standard Monitor, the top of the viewable part of the screen should be level with your eyes.

#### Screen Image

Screen Image should be legible, flicker-free, stable and free from glare and reflections. It should also tilt and swivel easily to suit the user's needs. If your legs are not reaching the floor, use a footrest.
