

LAMINATED GLASS

LamiGlass Colour

Safety and Security with coloured PVB interlayer

- **Ideal for decorative or architectural applications**
- **Break safe characteristics**
- **Resists manual attack and vandalism**
- **Provides UV protection**

GUARDIAN offers LamiGlass Colour, comprising two or more panes of glass bonded together using tinted PVB interlayers. Different combinations of glass thicknesses and numbers of interlayers provide a range of different performances in a choice of transparent or opaque colours.

PRODUCT DESCRIPTION

All LamiGlass Colour is tested in accordance with European standards, to ensure that the glass can resist different levels of impact, creating a safe and secure barrier. The coloured PVB interlayers absorb up to 99.5% of ultra violet light, helping to reduce fading and ageing effects. When combined with different glass types and thicknesses, improved acoustic performance is achieved as the PVB interlayer helps to absorb sound energy, creating a more relaxing environment within the building. Guardian LamiGlass Colour is the ideal product for any number of commercial or decorative applications.

APPLICATIONS

LamiGlass Colour is used in many applications such as, curtain walling, windows, overhead glazing, partitions, balustrades, floors, doors, furniture, interior fittings, and general decorative applications where the coloured appearance can be used with light to create an attractive, decorative design, which can also provide protection, security, safety and improved acoustic performance.

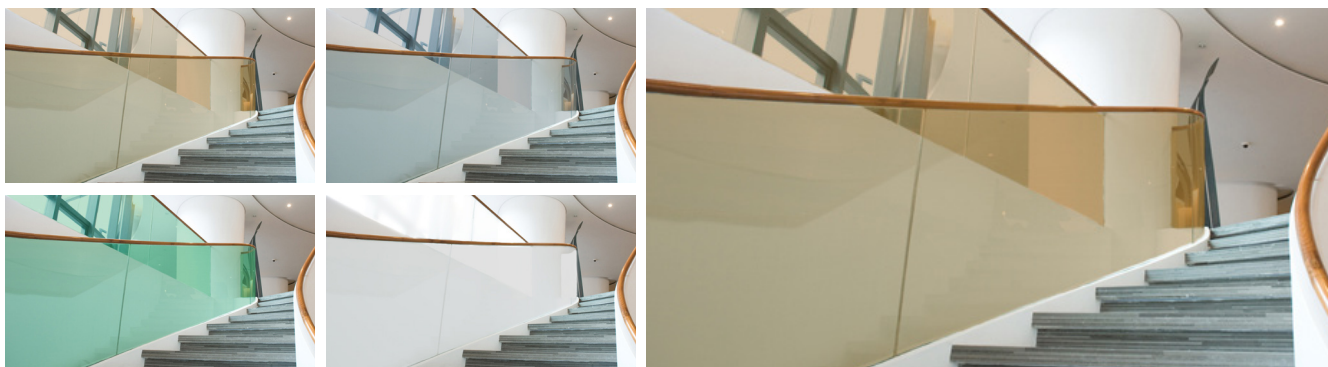

PROCESSING

Laminated glass can be cut to size to suit the required application, processed if necessary, and manufactured into insulating glass units together with other Guardian products.

AVAILABLE COLOURS

Available Colours	Code
Opal (Diffused)	2165
Bronze	3628
Light Bronze	5558
