

Case Study

Ecton Brook Primary School

Project:

**Screen Fence
Ecton Brook Primary School
Northampton**

Product:

Board Profiles

Ecton Brook Primary School were looking for a material to be used to replace an existing screen which was unsecure and visually unappealing.

The school, which has 500 pupils on two separate sites wanted a maintenance free material and chose hanit® by Hahn Plastics Ltd. due to its significant advantages over traditional materials such as timber.

The recycled board profile that was used on this project is ideal for challenging outdoor environments. The timber equivalent had rotted very quickly due to the poor quality preservatives that are used in timber since the legislation that stopped the use of oil based preservatives.

"We are extremely pleased with the new screen, the material looks fantastic and as it has a smooth splinter free finish it is perfectly safe around school. We will be recommending it for our future projects. "

Julia Kedwards
Executive Head Teacher

Recycled plastic products absorb no moisture and are resistant to vandalism. The board profiles look great and their longevity will be many times that of timber. There are a great variety of hanit® palisades, suitable for creative design in any new development, reconstruction and modernisation project.

Strong, durable and weatherproof, the palisades have a smooth splinter free finish. They have strong impact resistance and require little maintenance. The brown and textured surface resembles the natural beauty of wood. These products can be easily cut, nailed and screwed.
