

**HD SPA680**  
 Soil Pipe Adapter Kit  
 Connects standard 110mm pipework to 20,000mm<sup>2</sup>  
 ventilator. May be used for soil ventilation and  
 mechanical extraction with HD SRV680 ventilator.

Actual airflow: 8,000mm<sup>2</sup>

All extractor ducting should be insulated where it passes  
 through unheated areas and voids e.g. loft spaces.

Vertical ducting will require a condensation trap in order to  
 prevent backflow of any moisture or condensate.
