

## Trim Lockers

Generated on 05.12.2017

### Detailed description

Versatile free-standing locker units with recessed plinth detail. Designed to help maximize space in a flexible way.

#### Features:

- All 18 mm MFC construction.
- Heights – flexible height to a maximum of 2700 mm.
- Widths – standard module widths 300, 400 and 500 mm.
- Depth – flexible depth.
- Number of doors – standard per unit of 2–6 doors based on requirements.
- End conditions are not necessary, but if required they are available at extra cost.

### Options

#### Locks:

- Lock knob: Robust, functional and reliable, the lock will operate for many years to come. The core barrels can be suited or individually numbered, allowing multiple locks to be used on items such as lockers.
- Flush lock: A variation of the lock knob, the flush lock uses the same quality barrel as the traditional lock knob, which allows the same options on key numbers. Traditionally used when a separate handle is required a lock shouldn't protrude more than it needs to.
- Air/ RFID lock: A wireless, keyless, electronic lock. This design uses common building security systems such as an RFID access card to release the blocked locking system.
- MiniPAD/ keypad lock: The miniPAD offers the simplicity of a keyless locking system on a small scale. It combines simple operation, modest size, advanced technology and secure functionality, all within an elegant design.
- Mechanical combination lock: A great solution for when a hassle-free combination lock is required. This lock is available in single- and multi-user versions.
- EVO/ combination lock: A wireless, keyless, electronic lock. Locking system for furniture and lockers that works entirely without keys, power cables or transponders. To activate, simply enter the numbers and symbols for the individual code by rotating and pressing the knob. Available in single- and multi-user versions.

#### Accessories:

- Label frames: Comes in three different sizes. Small – 69 x 35 mm; medium – 93 x 42 mm; large – 100 x 74 mm.

Number discs: Very useful when there are large quantities of lockers.  
Two options available: Option 1: A vinyl disc supplied in brushed stainless effect with black text. Option 2: Laser-engraved, which is a better quality disc with a thickness to the material and more colour options available.

- Paper guides: Fitted to the doors at the manufacturing stage allowing no loss of time on the day of installation. Size of opening: 310 x 21 mm.
