CHOCOLATE

Application.

Onto dry JUB Base Coat, apply a single coat of the JUB Dash Receiver to a uniformed thickness of 8-10mm dependent upon the size of the aggregate to be used. Immediately whilst the render is still wet, throw the washed aggregate onto the surface to give a dense uniformed coverage. Immediately after the application, tamp the aggregate particles into the Dash Receiver with a wooden float to ensure a good bond is achieved. Do NOT apply the Dash Receiver in 2 coats, only a single coat should be applied and then dashed with the aggregate immediately. JUB Dash Receiver has an approximate open time of 60 minutes and it is important to plan and work within this time window.

JUB Dash Receiver is available in 25kg bags - Coverage rate of 2.5 square metres per bag

Please contact the JUB Technical Department for a full range of decorative aggregates.
