

## CASE STUDY - PARK HOMES

**System**

JUB EPS System with  
Unixil Render

**Substrate**

Traditional Built Mobile /  
Park Home

**Installing Contractor**

Wall Coatings Limited

### The Challenge

The existing coastal park homes in Gosport, Hampshire were exposed to the severe weather from the English Channel as well as having very limited thermal insulation, which meant that the residents were paying higher and higher energy bills to heat their homes. The challenge was to visually upgrade these properties with a durable low maintenance system and to provide a healthier internal living environment, whilst reducing the energy bills. However this was not the most important factor required by the local authority and the residents. Both parties required a proven and well tested system onto a park home structure and not just an adaptation to a system tested on masonry.

### The JUB Solution

JUB is known for providing high quality, low maintenance, durable renders as well as having a wide range of BBA and ETA approved insulation systems. However JUB are one of the few system manufacturers that have a fully tested ETA approved system specifically for mobile / park homes. This was the key decision point for the local authority and residents who required the comfort and security of a proven system and not an adapted system which had no supporting testing certification for this bespoke application.

This along with the knowledge that JUB is a long standing company of over 140 years, with a wide range of through coloured renders and an unrivalled support and installation service ensured that the decision to use the Jubizol PB System was an easy one.
