

KABA[®]

Restrictive movement cylinder*

The innovative design of the restrictive movement cylinder, ensures the door is guarded against being locked from within the room. The cylinder also guarantees that authorised key operation from the external side is maintained even if the internal thumbturn is being held by the occupant in an attempt to prevent access.

- Innovative solution
- Integral clutch mechanism for authorised key override
- Non-handed can be set on site for clockwise or anticlockwise turning
- Easy retrofit
- Available in all sizes from 31.5mm

Areas of application:

- Schools
- Colleges
- Universities
- Hospitals

Specification:

Cylinders:

Gege high security cylinder ranges in euro profile.

Minimum length:

Gege 6 pin cylinder Key Side 31.5mm. Thumbturn 31.5mm

Special Function:

Restrictive movement of thumbturn complete with clutch function for authorised key override at any time.

Special function specification:

The thumbturn is fixed within the cylinder to have a restrictive movement allowing the thumbturn to turn fully in a clockwise or anti-clockwise direction.

The clutch mechanism within the cylinder ensures the authorised key will always operate the cylinder, even if the thumbturn is held in an attempt to prevent access.

Notes:

Can be supplied independently or as part of a larger key system, full security and master keying capability can be specified.

Can be fully integrated as part of any kaba key system the cylinder specification options are wide ranging to allow for a truly bespoke solution to be specified.

Cylinder should be checked for functionality with lockcase before specifying.

Including:

- Extensive master keying capability
- Patent key protection
- Key copying protection (depending on system)
- Anti Pick protection
- Anti Drill protection

Can be included as part of a wide range of cylinder options and applications, including high security padlock and lockcase packages.

* also known as classroom cylinder
