AMF - TAKING CEILINGS TO NEW LEVELS

■ Levels of Excellence

For AMF a prime objective is to ensure that both products and service levels never fall short of excellent. The company's high quality products all meet stringent European and British standards. Performance levels achieved are clearly displayed in the AMF product literature so specifiers and clients can be confident of selecting the right tile and system for the application or project.

AMF recognise that service levels are critical to clients, specifiers and contractors. It is imperative that the complete order is managed effectively and delivered to site on time for an installation to run smoothly. AMF provides an excellent logistical service as well as offering technical advice through both the specification process and during product installation.

At its manufacturing plant in Bavaria AMF has created a Centre of Excellence called The AMF Forum. Specifiers, contractors and their clients have the opportunity to visit and see the facility for themselves. The AMF Forum offers specialist specifier training, CPD presentations and installation programmes as well as showcasing the company's innovative products and technology.

■ Levels of Sustainability

AMF accepts that the company has a responsibility for the environment, and to the community in which production facilities are located. It is the objective of AMF to contribute where possible to adopt a responsible attitude to protecting the environment by developing innovative and sustainable design solutions. To meet this objective AMF has operated an environmental management system in accordance with BS EN ISO 14001 since 2002.

■ Levels of Choice

AMF offers a diverse choice of products in terms of material, tile size, ceiling grid system, face pattern and performance levels. Mineral, metal, gypsum and wood. Exposed and concealed grids. Tiles, panels and planks. Integration with services and access for easy maintenance. Whether you require a high specification ceiling with optimal acoustic performance and integral fire protection, a tile suitable for a clean room application or a performance ceiling at a cost-effective price, specifiers and clients will find a 'one stop shop' with AMF Ceilings.

■ Levels of Innovation

Recent expenditure of over 70 million Euro has been used to develop AMF's 'state of the art' manufacturing facility in Germany. This investment will enable AMF to maintain its position as a leading innovator of ceiling technology and continue to increase its output of high quality, performance ceiling systems. Further investments are currently planned to ensure leading edge performance of AMF products and systems.

PERFORMANCE CEILINGS

More scope for innovation

Rotherham Schools Project

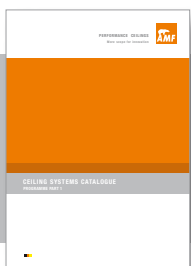

Requiring a range of ceiling tiles for different acoustic performances, Balfour Beatty chose to work with AMF products for the PFI projects for Rotherham Schools. From high performance Thermatex dB Acoustic to the cost-effective Filigran, AMF provided performance solutions that matched not only Balfour Beatty's needs but also the acoustic requirements of BB93. Richard Littlewood, Commercial Manager at Balfour Beatty explains: "Initially we had considered installing a plasterboard system with a general acoustic ceiling tile in order to reach the required level of sound insulation. But because of the outstanding acoustic levels achieved by Thermatex dB Acoustic we were able to install just a single system and recognise substantial savings".

Offices for Whittingham Riddell

To create a light and airy environment in new, purpose-built offices for Whittingham Riddell, architects Grant Thorp opted for the clean, crisp appearance of AMF Fine Stratos ceiling tiles. Partner Peter Grant comments: "Fine Stratos was selected because its sharp aesthetics and light reflectance properties worked well with the specialist lighting already specified. The client was delighted with the finished interior".

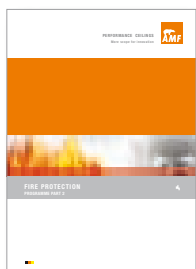

Levels of Performance

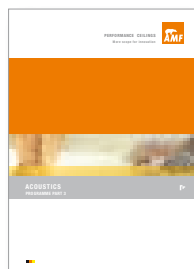

CEILING SYSTEMS CATALOGUE
Part 1: Containing all the classic surface patterns and installation systems, with brief insights into the AMF specialist brochures

FIRE PROTECTION

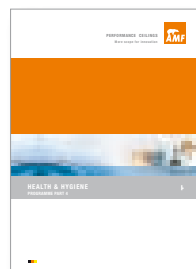

Part 2: Comprehensive information about the AMF range of specialist fire-protection products

ACOUSTICS

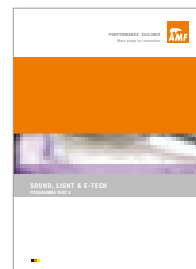

Part 3: Acoustic solutions for sound insulation and absorption from AMF ceiling tiles.

HEALTH & HYGIENE

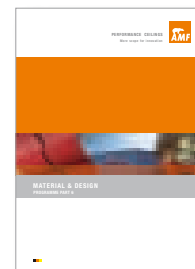

Part 4: The AMF clean room and hygienic ceiling tile programme.

SOUND, LIGHT & E-TECH

Part 5: Visual innovation and functional solutions for ceiling systems

MATERIAL & DESIGN

Part 6: Distinctive new designs and finishes in mineral, metal, gypsum and wood.

EDUCATION

Specialist solutions for the education sector meeting specific requirements in acoustics, fire protection and hygiene.
