

ENVIRONMENT AND RECYCLING

ENVIRONMENT AND RECYCLING

Environmental protection starts with the manufacturing process. By selecting the right raw materials we can maximize efficient manufacture of the product for its life cycle. Setting the standard in production procedures and improvements in machinery and technology contribute to crucial reductions in energy use and minimal emissions of pollutants.

The closed production cycle means that water used in the process is recycled several times while dust, off cuts and waste material are reused in the manufacturing operation.

Eliminating unnecessary packaging and reducing waste is a vital part of the business. To reduce pollution as much as possible, AMF uses only untreated wood for making pallets, waste paper for cardboard packing and pure PE foil for packing.

In spite of the product's long life cycle AMF tiles are able to be recycled. Printing on the back of the tile ensures that the raw materials used can be identified.

ENVIRONMENTAL SAFETY STANDARD ISO 14001

In 2002 the decision was made to increase the scope for our Quality Management certification and to adopt ISO 14001, the standard governing the management of environmental systems.

The location of AMF in the natural surrounding of the Bavarian Forest commits the company to environmental improvement. Reductions in emissions, lowering energy consumption and taking positive steps to input environmentally friendly resources are central to AMF. The environmental management system commits the company to comply with - and where possible exceed - applicable legal requirements.
