

# LED DOWNLIGHTS QUARTZ

With the same energy efficiency as the Q family, the QUARTZ gives the possibility of illuminating spaces with very low power consumption and high visual comfort.

QUARTZ series is presented in two sizes. The S2 version is supplied with modular elements as explained in the technical product page. This modularity results in a smaller light system that increases the light levels without the need for larger products.

QUARTZ series offers more with 70 lm/W and is the best option to illuminate new buildings or to simply replace any outdated of inefficient CFL lamps.

**Free of trim installation**  
QUARTZ incorporates the latest LED technology with a final design without trim. Its design also offers a totally uniform finish with a microprismatic optical diffuser, making the product a fully integrated luminous element in the ceiling. It also offers a high lumen maintenance and highly quality lighting.

Total integration  
in empathy with  
the architecture  
up to 73 lm/W

The entire series is available with a light source in neutral white 4,000 K or warm white 3,000 K. Between its characteristics highlight the colour stability over its lifetime.
