

Monarfloor® Wall Cap 100 System

Acoustic isolation and energy insulating system for timber flanking walls within multi-rise developments.

Monarfloor® Wall Cap 100 isolates the timber stud from the separating floor joists, reducing the acoustic flanking sound transmission within the structure. Monarfloor® Wall Cap 100 also ensures the integrity of acoustic floating floor treatments for party floors.

Features and Benefits

- Isolates the separating timber floor from the timber flanking wall.
- Reduces the flanking sound transmission energy within the structure.
- Improves air tightness at wall/floor junction (Approved Document L).
- Superior acoustic isolation and damping performance.
- Can be used as an isolator/innovative flanking detail with any acoustic flooring treatment.
- Easily on or off site installed within timber wall constructions.
- Significantly improves the acoustic isolation of the building when used in conjunction with other Monarfloor® acoustic systems for party walls and floors.
- Ensures the robustness of acoustic systems for party walls and party floors.
- Demonstrates a significant cost saving and flexibility in the design and build of the building.
- Surpasses performance requirements of Approved Document E of the Building Regulations.
- Can be used to improve the acoustic performance and gain credits towards The Code for Sustainable Homes.
- 3-4 cost-neutral credits for the Code for Sustainable Homes when used with other Monarfloor acoustic systems based on PCT test evidence (independent ceiling required for 4 credit floors).

Construction

Monarfloor® Wall Cap 100 consists of a bitumen composite membrane with acoustically rated fillers and a fire retardant finish.

Product Data

Roll Size	100mm wide x 8m long
Thickness	3.5mm (nominal)
Weight	3.8kg

Installation

See over for details.

Monarfloor® Wall Cap 100 System

Installation at a glance

- Roll out the Wall Cap membrane as a continual layer to both the head and sole plate. (This may be done in the manufacturing premises or on-site).
- Centre the membrane and form a return.
- Once centred and located staple the membrane to the timber frame with an industrial staple gun.
- Trim any excess membrane using a sharp utility knife ensuring the integrity of the membrane is not damaged.
- The panels can then be constructed on-site in the normal manner.

For optimum acoustic isolation, Wall Cap 100 should be installed at every party wall and floor junction.

Typical timber flanking wall with timber 'I' joist party floor.

Technical Support

Monarfloor® Acoustic Systems offers FREE technical advice and assistance on all aspects of acoustic systems.

We can also undertake site visits to provide contractors with advice and assistance at every stage of a project from concept to completion.

NOTE: This information is given in good faith being based on the latest knowledge known to Monarfloor® Acoustic Systems.
