

SIROCCO

Self-closing system for wooden or metal sliding doors weighing up to 80kg

The Sirocco system is a quiet, user friendly system with an integrated hydraulic soft stop which brings the door to a safe and cushioned close. The system has been designed to give a quiet and smooth operation and features an adjustable closing speed feature offering all the benefits of an automatic door without the need for a power source. Common applications for this system include hospitals and disabled access points, the optional hold open unit also allows you to adjust the time before the soft close engages meaning you can hold the door open for as long as required.
