

## Congratulations to your new floor!

You have decided for the installation of a hardwood or timber floor which has been treated with PALLMANN MAGIC OIL 2K series or the SOYABASE PLUS.

### The Life insurance cover for your timber floor

With the decision for the oil impregnation of your hardwood or timber floor you created a natural and beautiful timber appearance within a comfortable living environment. The protective layers which had been applied to your hardwood floor through the oiling process are continuously exposed to abrasion by the simple day to day usage of the floor's surface. The cleaning and care regime is therefore very important for the preservation of the oiled surface, the timber below and appearance overall with reference to the industrial standards DIN 18356 and DIN 18367. The correct and tailored cleaning and accompanying care procedure can, in regular application, preserve the beauty of your timber floor and prolong its life time by up to 5 times more. In the following it will be explained how you are provided with the warranty for your floor by parquet laying professionals as well as the manufactures of the parquet and the hardwood oil products by simply following the care instructions as explained here in tandem with providing a healthy room climate suitable for wood floors.

### After the Timber floor has been installed

Newly oiled or waxed wood floors must not be walked on for at least 12 hours (24 hours for SOYABASE PLUS) to ensure the applied oil or wax layer has completely dried. This especially applies to water based liquids or other non-aggressive liquids which should not come in contact with the freshly oiled surface for at least 12 hours (4 to 7 days for SOYABASE PLUS). The more the newly treated floor is protected in the first days the longer the life span of the wood floor. Full usage of the floor involving the placement of heavy furniture onto the floor should wait for at least 12 hours (4 to 7 days for SOYABASE PLUS). Newly oiled timber floors should not be covered with natural or synthetic carpets, tiles, membranes or similar in the first 12 hours after the oiling (in the first 4 to 7 days for SOYABASE PLUS).

### Your parquet maintenance operation:

**Important Notes:** A healthy room climate does not only provide well-being for humans but supports the longevity of your hardwood floor. Timber as a natural product will always respond to air humidity by either absorbing moisture from the surrounding air or disperse moisture to the surrounding air. Changes in the air's moisture content will trigger a shrinking or swelling in the timber causing gaps to appear in the timber floor. For this reason we recommend a permanent room temperature of 18 to 20°C with a relative air humidity of 50 to 60%. A hygrometer provides essential assistance when measuring and controlling room climate. A warranty for the executed work cannot be given. Start some trials yourself if in doubt.

These cleaning and care instructions are applicable to all hardwood and timber floors which comply with DIN 18356 (parquet works) and DIN 18367 (wood block works) which have been treated with PALLMANN MAGIC OIL 2K, - ERGO, -SPA, -COLOR and SOYABASE.

**Attention:** Roller casters and sliders must comply with DIN EN 12529 (Synthetic or Felt). Metal made furniture and items need to be placed onto a protective mat. No items containing any form of softening agents as for instance artificial or natural rubber should come in permanent contact with the floor's surface. Adhesive films and tapes should not come into permanent contact with the floor's surface.

Cleaning and Care instructions  
for oiled timber floors

**Protect**  
your parquet floor!

The correct cleaning and care treatment  
is the life insurance cover  
for your oiled parquet floor.

## Quick maintenance cleaning

A quick maintenance cleaning with **PALLMANN WOOD FLOOR CLEANER** as alternative to a regular maintenance cleaning

1. Remove all dirt and dust from the floor using a fine broom, mop or vacuum cleaner.
2. Shake container well before use.
3. Spray-apply PALLMANN WOOD FLOOR CLEANER to the relevant area.
4. Proceed with the cleaning as usual using PALLMANN CLEAN & GO MOP and a PALLMANN MICRO FIBRE CLEANING CLOTH.

## Regular maintenance cleaning

Maintenance care with **PALLMANN MAGIC OIL CARE**

Suitable for the surface care of all prevalent oiled hardwood and timber floors.

1. Remove all dirt and dust from the floor using a fine broom, mop or vacuum cleaner.
2. Shake container well before use.
3. In case of heavy graying increase the concentration (possibly up to the pure application).
4. Evenly apply to floor in grain direction using the PALLMANN MOP and let dry.
5. The floor surface is ready to be walked on after approx. 60 min.

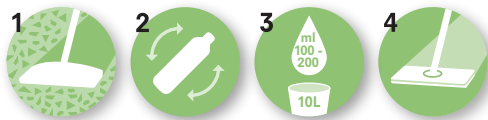

## Regular maintenance cleaning

Maintenance cleaning using **PALLMANN CLEAN**

PALLMANN CLEAN is a neutral all-purpose cleaning agent for all types of floors.

1. Remove all dirt and dust from the floor using a fine broom, mop or vacuum cleaner.
2. Shake container well before use.
3. Dilute approximately 100-200 ml PALLMANN CLEAN in 10 l water.
4. Apply to floor using a mop or cloth.

The maintenance cleaning is guided by the degree of soiling and desired level of hygiene.

## Basic cleaning to tackle strong soiling

The basic cleaning with **PALLMANN CLEAN** and the top-up oiling should be left to a professional

The frequency and need for a basic cleaning is determined by the usage and visible wear down of the hardwood floor. The top-up oiling with the suitable oil can only take place once the floor has been thoroughly cleaned with PALLMANN CLEAN.

Less frequented floor areas which are only rarely damp-mopped	once a year
Normally frequented living space	once to twice a year
Heavily soiled, commercially used floor areas	every 1-3 months

moderately frequented areas (within houses like living rooms and bedrooms)	approx. 2 months
more frequently used areas (like stairs, office rooms, and corridors)	approx. 4 weeks
heavily used areas (in buildings like schools, restaurants, shops)	approx. 8-12 days

### Please note:

Commercial areas are more typically used as private areas. Therefore, there are special requirements and correspondingly shorter cleaning and maintenance intervals for cleaning and care of hardwood floors in the commercial sector (for example: stores, restaurants, etc.).
