

FINE BEDDING CONCRETE

Issue 2

Guidelines for Use

It is important that Parex Fine Bedding Concrete (FBC) is mixed to the correct consistency by using the recommended ratio of water to powder.

Following the guidelines contained within the Parex FBC Product data sheet, you will achieve a "damp mix" which will ensure a long-lasting and durable finished result.

A visual check will confirm that the correct mix has been achieved.

X TOO DRY

If the material appears sandy yellow in colour, powdery in consistency and crumbles on contact, it is TOO DRY

X TOO WET

Where the mixed material is difficult to handle and slumps when placed on a flat surface, it is TOO WET

✓ CORRECT

If the mix forms into a ball, leaves a slight residue on a gloved hand and also remains intact on contact, the water content is CORRECT.
