Range: Surfacing & Pathways

Code: PSUR

PSUR121-A-NA Play Bark - (150mm), PSUR122-A-NA Play Bark - (300mm)

PSUR117-A-NA Rubber Play Mulch - Loose - (150mm)

Loose fill materials are popular additions, as they add texture and play value. Play Bark requires a 300mm deep layer for high level play, whilst the Rubber Play Mulch requires less due to its shock absorbent qualities. Loose fill materials will require topping up as the surface can displace over time.

PSUR123-A-NA Play Sand - (150mm), PSUR124-A-NA Play Sand - (300mm)

PSUR135-A-NA Play Gravel - (150mm), PSUR136-A-NA Play Gravel - (300mm)

Sand and Gravel are interesting textures that encourage digging, construction and discovery play. Play Sand is selected to be free from contaminants and good for building. Play Gravel is cleaned and graded, so only rounded pea gravel is utilised. 300mm depth is required for high level equipment.
