

LOUVRE SCREENING

Blending Aesthetics with Robust Security Solutions.

The Procter Louvre screen provides a perfect balance of architectural sophistication and robust security for a variety of applications. Ideal for hospitals, airports and corporate developments, our louvre panels offer bespoke solutions to meet your security requirements. The system restricts visibility and prevents intrusions while maintaining an attractive appearance.

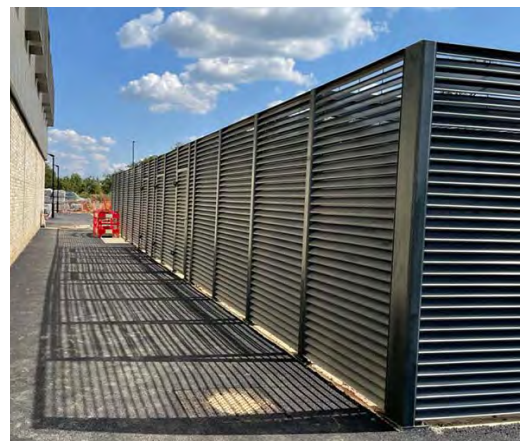

Our panels have adjustable louvre angles to provide different levels of visibility. The 80/20 louvre provides 80% screen coverage with 20% visibility. The 100/0 option provides complete screen coverage with zero visibility. These versatile louvres are perfect for covering up unsightly equipment and HVAC systems. They are suitable for wall cladding and car park screens. They are also suitable for plant screening louvres and ventilation grilles. They can be installed on balconies and balustrades. They can also be used in bin stores and are perforated for light control.

Specification

Height	Various, up to 3 meters
Width	Various, up to 1.5m
Finish	Hot-dip galvanized
Material	Steel
Visibility	80/20 and 100/0 options
Fixings	Panel to post
