

# Tiboo - J3903

## Technical specification

1- **The lacquered panels** are made from very high quality plywood 22mm thick. Made of alternate layers of thin birch, which offers longevity and an exceptional mechanical strength. The colours are applied by electrostatic spraying of two-component polyurethane lacquer that is free of heavy metals, to ensure high levels of resistance to potentially aggressive chemicals such as anti-graffiti cleaning products.

2- **The steps** are made using a compact material 13mm thick. The material is made up of 70% softwood fibres and 30% thermosetting resin, and it gives excellent resistance to weathering (sun, rain, damp...). The coloured surfaces are coated with pigmented acrylic polyurethane resins, this provides good protection against UV radiation and deterioration.

3- **The tubes** are made of stainless steel,  $\varnothing$  40mm, ensuring durability and a constant aesthetic appeal of the play equipment over a number of years.

4- **Plastic parts** are made of injected polyamide.

5- **The stainless steel fixings** are protected by polyamide anti-vandalism caps.
