

Case Study - Education

Requirement

This £6.4m project saw the relocation of Raeburn School to the new Gateway site in Tiffield. This new state-of-the-art purpose built school provides its pupils with a platform to learn and grow and the opportunity to enter mainstream education. The architecture of the facilities represents a new, modern and inspiring learning facility. A roofing system was required that could incorporate the integral gutters as well as architectural details to give the roofs their contemporary look. The product was also needed to match the doors and window frames in colour to present a smart finished building.

Solution

Protan SE 1.2 was used to cover 4,000m² of roof at the Gateway School. The dark grey membrane delivers both aesthetically and functionally. Protan SE membrane is exceedingly versatile and as a result was installed on a variety of different shaped roofs at the school; including flat, pitched, curved and high level roofs, the use of one roofing product also allowed for continuity throughout the site. Protan Omega Profiles were also used to give a standing seam effect on the roof and provide another architectural element to the design making it more visually interesting.

Warranty

A 15 year warranty is standard on all Protan SE range mechanically fixed systems. This comes with an assurance that all Protan (UK) Ltd products have excellent durability and high performance under extreme weather conditions

Please contact Protan (UK) Ltd for further details.
