

Flooring Contractor: **Sheldon Flooring** *End User:* **Farm Foods West Midlands**

CHALLENGE

As part of a building upgrade National Frozen Food specialists Farm Foods required specialist Stair Nosings to help improve health and safety and maintain a professional image on both the inside and outside of their central West Midlands office. One of the key considerations on this project was high foot traffic which had caused the stairs to suffer large amounts of wear and tear in the past. Health and safety was also paramount for this project and the Stair Nosings had to be clear and easy to see due to the dark/shaded area outside of the office. As it was a key entrance to the building the project had particularly tight timescales.

// Quantum Flooring fully met our needs on time and to the exact specification. We are especially pleased with the Ecoglo infill and like the fact that it recharges itself through light exposure. //

Midlands

SOLUTION

Quantum Flooring’s Heavy Duty Range (HF2) provided the perfect solution for Farm Foods. Different profiles were used for internal and external environments. The HF2 Range, used internally, has a neat finish that is aesthetically pleasing and is very easy to clean providing a low maintenance solution.

The HF2 profile has a slip resistant tread which is hardwearing and great for high footfall traffic, giving the benefit of extra safety. The HF2 Range fits with a wide range of flooring, as well as protecting the step edge and flooring material, thereby ensuring greater durability. This extremely safe and well maintained staircase will continue to meet the demanding requirements of every day foot-traffic for years to come.

The unique photoluminescent Ecoglo infill option was used outside to ensure 24 hour visibility. The step edge contrast is visible in all light conditions providing an ideal solution for the dark area outside of the building whilst the highly visible tread material used dramatically reduces slips and falls by improving the step edge contrast in all light conditions.

This cost effective and ultra low maintenance solution ensures that the staircase is highly sustainable and is able to uphold extremely high levels of foot-traffic.

PROJECT SPECIFICATION DETAILS

Outside:

- >> **Stair Nosing:** SF125R
- >> **Infill:** Ecoglo

Inside:

- >> **Stair Nosing:** HF2
- >> **Infill:** Light Grey
