

Window and Door Sensor Instructions

User Manual

Let's you know if a door or window has been opened or closed Link with other products to create scenarios such as:

- Window opens, turn down your ECO-2 radiator valves
- Door opens, turn on your lights
- Cupboard opens, get a text via IFTTT

Two part battery operated wireless sensor comprising separate magnet and sensor-transmitter units. Each time the sensor and magnet units separate or come together, the transmitter will send a radio signal to the network.

Compatible for use within the buildings automation system. Suitable for alarm and surveillance and where ever notification of opening and closing of doors and windows, garage gates, etc. is needed.

Low battery indication to remind you to change the batteries. Simple to set-up and fit.
