

Single Person Operation GRP Access Cover Specification

Relinea's range of single person operation GRP access covers and hatches are a lightweight, cost effective alternative to steel access products. Our range of composite covers, used in conjunction with our grating range, provides safe and secure access to pumps and dry wells that are suitable in an extensive range of corrosive environments including marine and chemical.

Due to the lightweight nature of Relinea's GRP Access Hatches, installation can be carried out by only two men, eliminating the use of heavy lifting apparatus.

Relinea's GRP Access Covers and Hatches conform to BS 124:1994 - Group A15.
