

Builddeck delivers A+ Aluminium Decking System for balconies and terraces at the Welbourne in Graham Street, London.

In early 2019, Builddeck introduced the stunning new aluminium decking to the already extensive range of superior composite decking products. Its simple and sturdy design ensures rapid installation regardless of the complexity of the project. Designed to be supported by Builddeck's own Aluminium Joists and complete Non-Combustible Sub Structure, it is the perfect option.

Builddeck were approached for a large upcoming project in Graham Street, a town in the London Borough of Haringey. They required a non-combustible aluminium decking system for the numerous balconies and roof terraces throughout the new build high rise dwelling, the Welbourne.

Occupying a prominent corner site opposite the station, Welbourne is a key component in the transformational masterplan for Tottenham Hale.

Welbourne will provide 131 council rent homes, a health centre serving 20,000 local people and retail space.

Welbourne was granted planning consent in December 2018 as part of the estimated £500 million project in Tottenham Hale, for developer Argent Related, that will develop five sites around the station and deliver 1,030 new homes.

At Builddeck, we take great pride in our products and work very closely with our customers to ensure a smooth delivery and installation process. This particular project was no exception, and even received some additional materials delivered directly by one of our senior members of staff. This project has been a pleasure to work on and as always, it is great to team up with amazing project developers and contractors.
